N890MA

Departed from KFRG with full tanks and Oil at ~5 Quarts

This is a new plane that Icarus Flying Academy recently bought, and I flew it for the first time with my student, Fuad Abdo. We completed our preflight checks and proceeded inside the cockpit to start the aircraft. We encountered trouble starting the engine and attempted to crank it three times with no success. Our Chief Flight Instructor, Edwin Torres, was on the ramp when I asked him to help. With his assistance, the engine started, and my student and I returned to start the airplane. It took us two more attempts to start the aircraft. We performed our run-up checks, and the engine was functioning smoothly. We departed for the southeast practice area around 11:40 EST from KFRG airport, climbing to 1500 feet, when KFRG Tower instructed us to restart the Transponder. Once the tower could read our transponder, we received approval to change frequency and contacted New York Approach.

Upon reaching Captree Monument, I asked my student to pick a point on the ground as reference which was the Light House. We were practicing Private Pilot maneuvers, starting with 'turns around a point' at 1100 feet near the lighthouse. During the maneuver, our altitude ranged between 800 feet and 1100 feet. After a few turns, I instructed my student to head East and climb to 2000 feet. Before we began climbing, I asked my student to switch the fuel tanks (fuel selector) from Left to Right, as required every 30 minutes. During the climb, around 1400 feet, my engine did not produce enough power, and I noticed the propellers were not spinning as fast anymore. I attempted to restart the engine without success. I switched fuel tanks, moved from Right to Left, toggled the magnetos Left and Right, adjusted the mixture, and used Carb Heat, repeating the sequence of switching tanks, magnetos, and mixture. My engine instruments showed green, electric fuel pump was on as we are supposed to keep it on practicing our maneuvers and the alternator was working. I tried switching the fuel selector from Right to Left one more time in hopes that it would solve the issue. I was around 1000 feet when I contacted Approach to declare a Mayday. While attempting to restart the engine, I turned towards the beach in the direction of the westerly winds. My airspeed was at 73 KIAS, and I was gliding, aiming for a section of the beach with fewer people to land the airplane safely. I followed the emergency checklist procedure for an engine failure in flight, focusing on ABCs – Airspeed, Best place to Land, Checklist and Communicate.

On the ground, I saw about 3 people with a dog ahead of the aircraft and thus I veered the yoke to the left slightly which caused a hit on the left wing. We felt a heavy impact on landing. Thankfully, both of us were safe.

Marine patrol, Police and some really kind local people at the Atlantique Beach helped us and made sure of our safety.

Operator/Owner Safety Recommendation

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)**Was there Mechanical Malfunction/Failure?** ☒ Yes ☐ No*(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)*

Engine Failure - Lycoming, O-320-E3D, L-37590-27A. It started with rough spinning of the propeller followed by attempting to restart the engine using the checklist, the engine did not revive. All along we were continuously descending, I called out Mayday.
