

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.nts.gov.

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

2 Prop strikes with all six blade tips bent backwards

Scraped nose gear doors

Bent nose gear extension rod

Scraped underside of nose radome and very lower portion of forward bulkhead, immediately aft of the radome

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

See Initial Pilot Statement and Addendum to Initial Pilot Statement attached.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

- If you're going to fly a Beechcraft Baron variant and anticipate having to manually crank the gear down, might consider doing some upper body weight/strength training, especially in regard to developing forearm, bicep, and shoulder strength. Since this event I've heard of pilots who have advocated for climbing into the back seats and cranking with both hands in order to get leverage and/or enough applied strength to crank this type of gear down
- Might be easier to crank the gear down if the crank handle was longer, affording more leverage to manually extend the gear or, possibly, change the gearing ratio in the gearbox so less brute force strength is needed to get the gear extended against the wind resistance (but that would probably require more crank turns and possibly inject other drawbacks under differing scenarios)
- Might also consider an alternate way to manually extend the gear that doesn't necessitate as much human arm/shoulder muscle strength
 - some other aircraft use a pneumatic "blow down" method that the pilot can actuate with an easy pull of a lever or turning of a valve in the cockpit
 - maybe a hydraulic mechanism that utilizes those type engineering principles and a lever-actuated "pumping" handle within easy inflight reach of the pilot
 - a modification that utilizes an independent electric motor connected directly to the manual crank/handle assembly that would run directly off the aircraft battery (or its own, independent power source); maybe something like an industrial strength power drill that connects into the existing manual cranking mechanism (similar to how some electric drills have been adapted to power small aircraft tow bars)

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

LH Engine/Malfunction:

- IO-520-E(2), Continental, SN 215769R, TT 1055.7, SMOH 705.7, Time since inspection 1.7 hrs
- Momentarily high EGT in-flight; appeared to clear that condition at reduced throttle but later experienced degraded power output; still producing power upon landing

Landing Gear (both normal and manual extension):

- Solenoid Relay, Hawker Beechcraft, Part #6046H39A, Approximately 25 gear cycles since last inspection (to include two manual extensions), Time since last inspection 1.7 hrs
- Gear failed to extend normally; pulled/reset landing gear motor circuit breaker; failed to extend again: +

Total Time/Cycles On Part1055.7 (Eng) Hours25 (Gear) Cycles**Time Since This Part Inspected/Overhauled**1.7(Eng/Gear) Hours**FUEL & SERVICES INFORMATION****Fuel on Board at Last Takeoff**

(Convert from pounds, as necessary)

68 Gallons**Fuel Type**

- ☐ 80/87 ☐ 115/145 ☐ Jet B ☐ Other, specify _____
☒ 100 Low Lead ☐ Jet A ☐ JP8
☐ 100/130 ☐ Jet A-1 ☐ Automotive

Other Services, if Any, Prior to Departure

I did not request or receive any servicing the day of this flight. However, finding a small amount of oil on the bottom blade of each of the props, did request the chief mechanic come and check it out. He came out but, after checking, indicated this was normal for those type of older prop hubs and, thus, it was nothing we should be concerned about. I concurred. +

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No**Method of Exit** – Describe how the occupants exited and how many occupants evacuated each location

Both the pilot and passenger exited the aircraft through the main/primary cabin door next to the front, right-hand seat position.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft)**Aircraft Registration Number**N/A**Manufacturer:** _____**Model:** _____**Damage to Other Aircraft**

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

Pg 3:

- Max GW 5100 [the 5100 is Max T/O GW]
- Number of seats = 4 [N9308Q has a total of 6 seats but we were flying this aircraft without the far back seats installed and insuring it as a 4 seat (1+3) asset]
- LH/RH Engine hours are as of the last annual inspection date of 5/22/2024 [only 1.7 hours flown since that inspection date]
- Note: N9308Q is modified with Colemill Enterprises, Inc President 600 IO-520-E(2) engines (rated at 300 hp each) and matching props [modified 1975], vs the original B55 IO-470 engines/props

Pg 5:

- as of the date of this flight event (7/1/2024), the date of my last Flight Review was 7/28/2022 (as indicated)
- as of the date of this signed document, I had subsequently had a more recent Flight Review, dated 7/10/2024
- Total PIC flight times are as of 5 Aug 2024, the signing date of this form
- On the date of the incident flight:
 - in the 90 days immediately preceding I had about 20 total hours, 2 hours in make/model, 18 hours ASEL, 2 hours AMEL
 - in the 30 days immediately preceding I had about 13 total hours, .4 hours in make/model, 12 hours ASEL, .4 hours AMEL
 - in the last 24 hours immediately preceding I had 1.4 total hours, .4 hours in make/model, 1 hour ASEL, .4 hours AMEL
- I have never held a civilian flight instructor rating but to give a more complete picture of my flying experience, I:
 - was a command pilot in the US Air Force, with nearly 27 total years of peacetime/contingency operational global flying experience;
 - was a KC-135Q Instructor Pilot for about 11 of those 27 years (mainly supporting global SR-71, U-2, and F-117A Stealth Fighter missions while stationed at Beale AFB, CA)
 - I additionally:
 - served as a Wing Standardization and Evaluation Instructor Check Pilot for several years at Beale AFB
 - was Chief of the Wing's Consolidated Training Flight for both of the KC-135Q squadrons based at Beale AFB
 - served as both an Operations Officer and Squadron Commander for one of the two KC-135Q squadrons based at Beale AFB

Pg 8:

- lowest cloud condition height was approximately 4000 ft AGL out to the E & SE of the field; but out to the W & NW, where I intended to conduct this flight, it was basically clear and 10+ Visibility
- I approximated the temps, altimeter setting, wind direction, wind speed, and density altitude as best as I could recollect [I recorded the readings at the time but didn't retain them immediately afterwards]

Pg 10:

- the 25 indicated landing gear cycles is a rough approximation of what occurred during May and June 2024 (mostly during the final days of the annual inspection and the 3 subsequent flights, to include the incident flight on 1 Jul 2024)
- suspect intermittent landing gear solenoid relay (down position) failure/malfunction
- manual gear extension malfunction due to not being able to fully crank down the gear within the time available before landing (even though we were at low airspeed of 90-95 KIAS, slightly below Blueline of 100 KIAS); unlikely, but this might be due to some other mechanical issue within the gear extension system (post flight inspection showed the nose gear extension rod was bent but this is more likely due to the nose gear collapsing upon landing)

From the malfunctions/failures section:

- Subsequently, unable to fully extend gear manually (cranked 47 turns before unable to crank any more - occupant reported unable to get any more turns it's "against the stops"; POH says to crank "as far as possible (approximately 50 turns)"

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
