

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Rural Retreat State: Va

ZIP: 24368 Country: USA

Latitude: 36.89N Longitude: 081.35W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 07/21/2024 Local Time: 10:00AM

mm/dd/yyyy

Time Zone: EST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N185GS

Manufacturer: Cessna

Model: A185F

Serial Number: 18503646

Year of Manufacture: 1978

Amateur-Built: ☐ Yes If Yes: ☐ Kit/Plans Make: _____

☒ No ☐ Original Design

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 3500 lbs

Weight at Time of Accident/Incident: 2627 lbs

Number of Seats: 4 Flight Crew Seats: 2

Cabin Crew Seats: 0 Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

Standard

- ☒ Normal
- ☐ Aerobatic
- ☐ Balloon
- ☐ Commuter
- ☐ Transport
- ☐ Utility

Special

- ☐ Restricted
- ☐ Limited
- ☐ Provisional
- ☐ Special Flight
- ☐ Experimental
- ☐ Special Light-Sport
- ☐ Experimental Light-Sport

☐ Certificate of Authorization or Waiver (COA)

☐ None

☐ Unknown

Landing Gear

(Check all that apply)

☐ Retractable

☐ Tricycle

☐ Amphibian

☐ Emergency Float

☐ Float

☐ Hull

☐ Other Launch/Recovery System

☐ None

☒ Tailwheel

☐ High Skid

Last Inspection Type

- ☐ 100-Hour
- ☐ AAIP
- ☒ Annual
- ☐ Continuous Airworthiness
- ☐ Conditional Inspection
- ☐ Unknown

Date Last Inspection: 9/11/2023

mm/dd/yyyy

Airframe Total Time: _____ hrs

hours measured at (Select one)

☒ Last Inspection ☐ Time of Accident/Incident

Type of Maintenance Program (Select one)

- ☒ Annual
- ☐ Conditional (Amateur-built only)
- ☐ Manufacturer's Inspection Program
- ☐ Other Approved Inspection Program (AAIP)
- ☐ Continuous Airworthiness
- ☐ Other, specify: _____

Description of Fire Extinguishing System

- ☐ None
- ☐ Specify: _____

Propeller 1

- ☐ Fixed Pitch
- ☒ Controllable Pitch
- ☐ Ground Adjustable

Manufacturer: McCauley

Model: D3A34C4d-C

Propeller 2

- ☐ Fixed Pitch
- ☐ Controllable Pitch
- ☐ Ground Adjustable

Manufacturer: _____

Model: _____

ELT Installed: ☒ Yes ☐ No

If Yes:

ELT Manufacturer: _____

Model or Part No.: _____

TSO No.: ☒ C91 (121.5 MHz) ☐ C91a (121.5 MHz)
☐ C126 (406 MHz)

Was ELT still mounted in aircraft? ☒ Yes ☐ No

Was ELT still connected to antenna? ☒ Yes ☐ No

Did ELT Activate? ☒ Yes ☐ No

If activated:

Did ELT Aid in Locating Aircraft? ☒ Yes ☐ No

If not activated:

- Indicate Reason:
- ☐ Impact Damage
 - ☐ Fire Damage
 - ☐ Battery Expired/Damaged
 - ☐ Unknown

Additional Equipment (Check all that apply)

- ☒ ADS-B
- ☐ Airframe Parachute
- ☐ Angle of Attack Indicator
- ☒ Autopilot
- ☐ Data Recorder
- ☐ Electronic Flight Bag or Handheld Device
- ☐ Electronic Multifunction Display

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft has damage to the wings, landing gear, tail and prop. No damage to other property

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Sunday July 21st, 2024 with calm winds reported by the AWOS, I entered a standard left hand pattern to runway 26 at Mountain Empire Airport, KMKJ. Maintaining heading, altitude and pattern speed with the landing check list complete, I began my descent at the normal descent point, abeam the planned touchdown point, with my pitch attitude set for an average 500 rpm descent rate and a power setting for the appropriate speed with the initial flap configuration. My turn to base from final occurred at the appropriate position with a pitch and power combination along with the addition of flaps to attain the proper speed for the base leg. Leading the turn to the final approach segment full flaps were applied and the pitch and power were adjusted to maintain the designated final approach speed. The brakes were checked and final items completed, I aligned the nose with the runway centerline by use of the rudder. With the final approach speed attained and alignment assured, I focused on the aim point controlling the pitch and power settings to maintain my sight picture. Approaching short final, I began the initial power reduction to cross the threshold at 63 knots, the normal speed for which the landing attitude, approximately 6 ft., necessary for a 3-point landing. Once in the landing attitude, approximately 1 foot above the runway, I began a slow power reduction to set the landing attitude for a low energy, full stall, 3-point landing which is necessary for the slowest possible ground speed and the shortest ground roll distance.

Upon touchdown, in the 3-point landing attitude, the aircraft abruptly swerved to the right as if the right brake was applied, which it was not, both of my heels were on the floor with the balls of my feet resting on the bottom of both rudder pedals in the ready position for rudder application. The abrupt right turn was sharp enough to accelerate the left wing creating a lift moment to raise the left wing, which took the left wheel off the runway surface taking away my ability to apply left brake enough to assist with countering the right turn with left differential braking. In an attempt to counter with power, I applied enough throttle to counter the right turn with torque and other associated left turning tendencies to realign the aircraft to the runway centerline in an attempt to keep the aircraft on the runway boundary.

Simultaneously I applied forward control yoke to counter the lifting moment from thrust application but the elevator and rudder control were insufficient due to the low energy state from the 3-point landing and the fact that flaps blanked out most of rudder and elevator immediate effectiveness. With flaps fully extended and the application of full power, the majority of the lifting component were from the flaps because of full flaps blanking most of the rudder and somewhat the elevator taking away my ability to counter the lift force and left turning tendencies. I applied full right rudder to counter the yaw and full forward control yolk to counter the pitch, but to no avail. Only a few seconds to make these immediate corrections and in hind sight the reduction of flaps or even a head wind of 6-8 knots would have allowed more controllability to counteract the associated aerodynamics and prevent the aircraft incident.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

The airplane spent a considerable amount of its life on floats so the land / landing gear and therefore brakes were not used a lot. I am the third owner to have an incident with the plane in its ground landing configuration.

I believe the right brake caliper drag causing the plane to veer to the right and raise the left wing like it did. I say this because I was going very slow in a three point landing attitude with positive tire engagement to the pavement and virtually no wind to cause it to drift. I did not touch the brakes, my process is to check the brakes then work the rudder right to left on final to make sure I have positive rudder and not engage the brake. The pilot would not have positive rudder authority if he or she were to inadvertently push the brake.

As I landed, the plane did not bounce and it was tracking center line. As the plane touched down the stall horn annunciated so in all respects it was a good three point landing with the lowest energy possible while tracking center line.

Having the brake system completely gone through and making sure it was 100% in perfect working condition is the only way to ensure one would not have an issue such as a dragging brake. In hind sight the reduction of flaps or even a head wind of 6-8 knots would have allowed more controllability to counteract the associated aerodynamics derived from the pull to the right and prevent the aircraft incident

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

The right brake caused the airplane to veer to the right which began the sequence of events
