NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs in effect at the time of the accident/incident:

When I checked the weather the above direction and wind were noted. Upon taxing the wind sock validated the same. After my run and when lining up on the runway for departure it started to rain. I departed and experienced what I think is wind shear. After the event I looked at the weather and at 11:55 it showed winds variable at 5 with gusts to 28 and at 12:15 winds 330 at 5. I don't have weather information at the exact time of departure but I feel I there was a fairly substantial wind change as I departed..

Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Damage to the aircraft is to the belly, prop and the wing where it struck a landing light, wrinkling on the fuselage.

A landing light was damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Our initial destination was Albertville Regional Airport (8A0) but we diverted to Cullman Regional airport because of weather. I landed at Cullman Regional Airport on runway 20 at approximately 11:10 AM in good weather. I taxied to the fuel tanks and added fuel. My passengers and I went into the FBO to use the restroom and take a break. We checked weather on ForeFlight and the weather was favorable and VFR. We left the FBO and I put a quart of oil in the airplane. Our intended destination was Ankeny Iowa.(KIKV). I checked the windsock and it still favored runway 20. We observed an airplane depart on runway 20. As I did my run up it started to rain lightly. The sky was clear at the end of the runway. I lined up on the runway and it started to rain a little harder. I departed on 20 and I had a positive rate of climb. I raised my landing gear. The engine was operating normally. It seemed at the time the airplane would not create lift and the airplane was pushed slightly toward the ground.(in retrospect this may have been wind shear with unanticipated change from a headwind to a tailwind). I have never experienced this before. The controls felt mushy and I could not create lift. I was concerned the airplane would not continue to fly and we would not be able to out climb the terrain. I made the the decision set down on the remaining runway. The plane landed approximately 300 feet from the end of the runway and we hit a runway light when we exited the runway. We slid off the end of the runway on a fairly smooth runoff area for about 200 feet before the airplane came to a stop. We exited the plane. Their were no injuries.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

If I was aware that the wind event in front of the weather would create the wind event I would not have departed.
