

Ryan Enders
Aviation Accident Investigator
Eastern Region

Date: September 3, 2024
Subject: ERA24LA360, Mechanic Interview
Contact: Trey DeBois

Mr. DeBois was contacted via telephone to discuss the maintenance records for N686AC. The following is a summary of that conversation.

Mr. DeBois was asked if he had the current maintenance records for the airplane. He replied that he did and that he would PDF the logbook entries and email them to the IIC.

Mr. DeBois was asked if there was any maintenance completed recently to the landing gear. He replied that 6 months prior there was a landing gear inspection completed. During that inspection, the gear was removed and then put back on. The nose landing gear shock absorber was replaced at this time. The last inspection was signed off in July and the logbook entry states that a gear swing was accomplished.

Mr. DeBois was asked if he had any additional information that would be beneficial to the investigation. He replied that he did not.
