NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On September 20th, 2024 I was asked by Bob Pierce, the owner of N7037G, to conduct a one hour break-in flight. Mr. Pierce had recently completed installing an overhauled engine. I was informed that the ground runs had been completed and it was ready for the first flight.

I arrived at the airport and briefly spoke to Mr. Pierce. At approximately 15:35 EDT I loaded up into the plane. The engine started without issue and within a couple turns of the propeller. All engine indications were normal and the engine sounded as expected. Given that it was a newly overhauled engine I wanted to limit the idle time so I made my way towards runway 5 for a run-up. I ran the engine up to 1700 RPM and conducted a mag check. Both resulted in a drop of less than 100 RPM. I checked the carburetor heat and had the resultant RPM drop. Engine indications also were still normal with oil pressure within the green arc.

I taxied onto the runway and proceeded to back-taxi runway 5. During the back taxi the engine continued to run as expected. I made the turn at the start of runway 5, made my radio call and applied full throttle. This was at approximately 15:42 EDT. The initial RPM indication was 2300 RPM. I expected this to pick up as I continued down the runway and more air moved over the propeller.

The airplane accelerated to approximately 68-70 MPH and it felt like it wanted to fly. This was before taxiway A3. I lifted the nose and gained some altitude, but almost immediately the plane did not continue to accelerate and lost a couple MPH. I looked over and I still only saw 2300 RPM. I immediately pushed the nose down to accelerate. I immediately began trying to determine the safest course to get the plane on the ground. Within a couple seconds I was past mid-field and I felt the engine starting to lose some power. I looked to my right and the RPM was starting to roll back. The propeller was still turning at this point.

I was quickly running out of runway. I banked to the right to see if I could give myself enough room to make a left 360 to land on runway 23. I quickly realized I didn't have the altitude or the speed to complete that maneuver and that I likely would end up in the trees to the left of runway 5. With about ¾ of the runway behind me the propeller stopped turning. Continuing straight ahead would have put me into the localizer antenna tower at the approach end of runway 23. There is also a significant drop off at the end of the runway. If I immediately put the plane down, I risked an overrun and potentially falling off the end of the retaining wall.

I made the decision to go to the right. The land in that direction dropped down into a gully before rising back up to a half-built housing development. As I banked to the right towards that area, I put in partial flaps to help lower my stall speed so that I could try and make it past the gully and up onto the hill out of the gully.

As I came up to the hill I pulled back on the yoke to prevent the nose from striking and to try and plant the aircraft so that I could quickly bleed off speed as I continued up the hill. I was not low enough on the hill when I touched down in order to slow sufficiently to prevent going over the top of the hill. I was on the brakes but I crested the hill and came down into an empty part of the development. I continued to try and hold the yoke back to prevent the nose from digging into the dirt and flipping the plane. However, as I continued to slow, I entered an area with much softer dirt and the nose grabbed in the dirt. At that point the plane's nose dug into the dirt and the aircraft flipped over.

Once the aircraft came to a rest I quickly reached up to flip off the master switch to try and prevent any fire. I exited the plane through the pilot side door. I quickly ascertained I had not sustained any injuries beyond a couple very minor scrapes.
