NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

N7058G, our company Cessna 172, had been hangered at Culpeper, Virginia (CJR) airport for approximately two years awaiting cylinders to rebuild our Lycoming engine. The rebuild and annual inspection was completed so my wife drove me to the airport to fly the aircraft back to our farm/private air strip in Stafford County approximately 20 miles Southeast of Culpeper.

After pulling the aircraft out of the hanger, I performed a thorough pre-flight inspection. I turned on the master switch and checked the fuel level on the Engine Data Management (EDM 900) monitor. Fuel remaining indicated 14 gallons. The aircraft burns about 7.9 gallons per hour at 2400 RPM therefore I concluded that I had one and a half hours of fuel to test the rebuilt engine and then fly 20 miles to our farm.

When I attempted to start the aircraft, I discovered that the battery was too low to turn the engine over. I called the maintenance shop at the FBO to send someone to jump start the aircraft. Once the engine was started, I began my taxi to runway 04 for departure. As I taxied by the FBO, it occurred to me that I should and would normally stop for fuel but in this case it would require another jump start and, after all, according to the fuel remaining gauge I still had an hour and a half of fuel to fly over the airport to test the engine then fly 20 miles to the farm.

Upon reaching the run-up area for runway 04, I performed a thorough pre-flight runup then departed. I climbed to 3000 feet mean sea level and began circling the airport. After approximately 15 minutes, I turned to a heading of 150 degrees and headed for the farm. At approximately five miles from the farm, I began a decent from 3000' to 1500'. Upon reaching 1500', approximately 3 miles from the farm, the engine quit.

I quickly scanned the area for a clearing for a forced landing. Directly to my port side was a horse farm with what appeared to be a pasture approximately 600 to 800 feet long. I set my airspeed for best glide and turned a left base leg for the pasture. When I turned on final for the pasture I lowered 30 degrees of flaps. It was then that I noticed that the trees on the approach to the pasture were 40 to 60 feet tall. I adjusted my flaps and airspeed for an obstacle approach. When I was clear of the trees, I slipped the aircraft to loose altitude and began a flair about a third of the way down the pasture. My airspeed was still about 65-70 miles per hour. It was then that I noticed that at the end of the pasture was a gravel drive with a utility line and a stand of short trees. Since I still had flying speed, I pulled the aircraft off of the ground clearing the utility line and the short trees. This maneuver served to bleed off the airspeed so I came back down fairly hard on the other side of the trees into a small pasture bordered by trees on three sides and the Rappahanock River about 50 yards in front of me. To avoid going into the river, I attempted to ground loop the aircraft to the left away from the river. In doing so, I drove into the stand of trees that I had just hopped over.

The wind screen shattered and I sustained a cut on my forehead and a hairline fracture in a neck vertebra. The pilot door was jammed by tree limbs so I exited the co-pilots door and crawled through limbs and stickers to an area about 20 feet behind the aircraft. A man and

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Never pass on the opportunity to put fuel in your tanks.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

FUEL & SERVICES INFORMATION

Fuel on Board at Last Takeoff

(Convert from pounds, as necessary)

14.0 _____ Gallons

Fuel Type

☒ 100 Low Lead☐ Automotive☐ Jet A☐ Jet A-1☐ Unleaded AV☐ Other, specify _____

Other Services, if any, prior to departure:

Jump start battery. 14 gallons of fuel indicated by EDM

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☒ Yes ☐ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location:

After the aircraft came to rest, I attempted to exit by the pilots door but it was blocked by limbs so i exited by the co-pilots door and crawled clear of the crash site.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for other aircraft.)

Aircraft Registration Number

Manufacturer: _____

Damage to Other Aircraft:

☐ Destroyed☐ Minor☐ Substantial☐ None

Model: _____

Registered Owner of Other Aircraft

Pilot of Other Aircraft
