- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I approached for landing on r/w 7. The automated Wx reported 11 kt from 320 just after departure from I64.

This would have given me a quartering headwind. As I touched down I encountered a direct crosswind. Before I could get the speed below 35 the cross wind had increased from the report and put me in a groundloop. I recovered the first gust while still on the left gear as I had the left wing down into the wind. As I touched the right wheel down the crosswind put me in a violent groundloop. I tried to recover but, I was instantly going sideways across the runway. I applied the right brake trying to slow the rotation.

I was skidding into taxi Alpha facing west 180 degrees from my intended landing direction. I thought the incident was over when the right wing was lifted by the gusting wind and without adequate aileron control the left gear was under the aircraft CG and it collapsed allowing the left wing to contact the pavement bending the spar extension. I sat mostly on taxi Alpha with about 6 -8 feet of right wing extending into RW 7. The ground crew helped me remove the prop & cowling so we could use the engine hook to lift the aircraft onto a helicopter dolly and move it to the hangar. The airport was closed for about half an hour.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

AWOS does not report gusting conditions till it gets above a trigger point. If they reported all gust conditions I would have avoided landing at KLPR and returned to I64 and waited for the wind to die down. I have been spending more time at I64 helping crew the gliders and towing gliders. I should have been flying 52K more, I would have noticed the wind gusts would possibly be in excess of the aircraft limit. I had just fueled at I64, had I left it at slightly below half a tank the CG would have been lower and the lower weight could have made it less susceptible to collapsing the gear.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

FUEL & SERVICES INFORMATION

Fuel on Board at Last Takeoff

(Convert from pounds, as necessary)

14.5 Gallons

Fuel Type

☒ 100 Low Lead☐ Automotive☐ Jet A☐ Jet A-1☐ Unleaded AV☐ Other, specify _____

Other Services, if any, prior to departure:

EVACUATION OF AIRCRAFTWas an emergency evacuation of the aircraft performed? ☐ Yes ☒ No

Method of Exit – Describe how the occupants exited and how many occupants evacuated each location:

The was no fuel leak, I shut off the mags during the groundloop and shut the fuel off as I exited the left door . I backed out in a crouched walk due to the left wing angleing down over my exit.

OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for *other* aircraft.)
