Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Extensive damage to Fire wall, damage to lower skin, and multiple brackets at the avionics sweet.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Myles went solo on 05/17/2024 at 7:00am. Students took off and did right traffic for runway 31 at KSGJ. Student solo Myles made his first radio call at midfield, the controller did not respond so Myles continued in the downwind leg and within 15 seconds Myles made another radio call saying he was midfield downwind for runway 31. Student solo Myles was cleared for the option with the intent to do a full stop taxi back. Once the controller gave him clearance Myles brought to power to 1600RPM, flaps 10, 0 degrees pitch. As soon as these he made his base turn because he was on a bit of an extended downwind due to the controller not answering first radio transmission. On base Myles kept pitch the same but put flaps to 20 degrees at 75-80 KIAS. Myles turned final and realized he was high (4 whites) so he reduced power and put flaps full. Over the approach lights of runway 31 Myles got back onto glide-slope at 65 KIAS. Student says the approach at this point was perfect. During the flare, Myles brought the power to idle, aiming at the 31 numbers. During the round-out Myles started to flare but hit the ground hard and bounced up. Student then says he tried to save the landing. Student then porpoised down the runway and did not initiate a go around, instead he continued to porpoise down the runway which was seen by controller, The controller asked Myles if he was okay and Myles responded that everything was okay. Myles then got off runway 31 at B1 and taxied back to Florida Flyers Ramp.

The cause of this incident was the students' failure to initiate a go around after a bounce landing.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

The hard landing during this particular solo flight highlights the importance of preparation and practice in flight training. This situation could have been mitigated with a few additional flight lessons and a stronger emphasis on go-around procedures, particularly after a month-long absence from flying.

Recommendations:

Do not stop flight training

Before undertaking solo flights, it's crucial to complete several more dual flight lessons with an instructor. This additional practice will help reinforce skills and confidence, especially after a break during training.

A strong understanding of go-around procedures is essential for any pilot. focus on practicing go-arounds until the student feels completely comfortable executing them in various scenarios. This skill can significantly enhance safety during landing.
