NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On October 3rd, 2024, I met my friend Bob Singal (a private pilot) at FXE around 8 am. We loaded the airplane with relief supplies (trash bags, gloves, can and dry goods...) weighing 98 Lbs to take to Cedar Key. I ordered our main fuel tanks topped off from Banyan Air Services, the fuel truck came and filled it up (copy of receipt included in email). I was the PIC. I filed an IFR flight plan from FXE to CDK and had checked the weather earlier that morning. The forecast was for VMC weather along our entire route both ways. I completed all the preflight checks. Before take-off, I did the usual engine run-up. All was normal.

We departed FXE at 0858 EDT and flew to CDK where we landed at 10:40 EDT. The flight was uneventful, the engine ran well the entire flight. We unloaded the supplies, handed them to the pastor who met us at the airport. I checked the weather and filed our return flight plan. I did another preflight, checking the fuel remaining both visually and per the gauges, since we did not have any option to refuel at CDK. We taxied out and completed another engine run-up before take-off.

We departed CDK at 11:53 EDT. Again, the engine was running normally. We climbed at our standard 25 in. of manifold pressure and 2500 RPM, we cruised at 21 in. of manifold pressure and 2300 RPM in a lean mixture configuration. We were cruising at 7000 ft until, at approximately 13:10 EDT, the engine RPM dropped to around 1000 to 1200. I responded by checking all engine instruments, all normal, simultaneously adjusting the pitch to maintain best glide speed. I called ATC and declared an emergency, telling them of our partial power loss while I began running emergency checklists. The first emergency checklist items called to move the mixture to full rich, turn the electronic fuel pump on, check the position of the fuel tank selectors, and turn on carb heat. After completing the procedure, the engine rpm quickly rose to 2000 before a second of two later, falling back to 1000 to 1200. ATC indicated the closest airport at 18 miles which was too far for us to reach. I asked Bob to look outside for a place to land. After about a minute with no change in engine performance, I ran the emergency checklist that helped to diagnose if an engine was over flooded with fuel, to no avail. After a few seconds, I put the engine controls back into the positions as per the engine failure/loss of power checklist, in case the engine regained power during the descent. I considered trying for a levee but it seemed too narrow, I did not want the airplane to flip. At about 1000 ft, I asked Bob to open the cabin door to make sure we could get out quickly. There seemed to be sugar cane fields everywhere below us. I made the decision to land in one of them since we were running out of altitude. I kept as low a speed as possible without stalling until we touched down. We came to a stop and assessed each other. Neither one was hurt, we secured the plane, I turned the ELT switch to on and got out of the cabin. Bob called the Emergency Services and we waited a safe distance away from the plane until they arrived.
