Description of Damage to Aircraft and Other Property <i>(Use additional sheet, if necessary.)</i> Aircraft propeller bent, cowling damaged, Vertical stabilizer and rudder crushed, top left wing tip damaged, "N" strut bent on right side, unknown damage to top of upper wing. No property damage.					
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink.)</i> Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible. N300E had not flown in a month so the plan was a local flight (KJGG-KJGG) to 'exercise' the aircraft. The weather was beautiful, light winds, clear and warm and I took off at 1:49pm. The plane had 3/4 of a tank of gas so no fuel was taken or other services. A pre-flight was performed including sumping the fuel. Taxi, warm up, run up and takeoff (runway 13) were all normal. The flight was normal, I climbed to about 2500' and practiced stalls and steep turns. I flew back over Colonial Williamsburg and approached the airport for a mid-field crosswind (there were no other aircraft in the pattern) for runway 13. The pattern was normal, with a short base-final which is typical for a tailwheel with little forward visibility. I crossed the threshold at about 75mph, which is normal, and touched down around 65mph on centerline at 2:08pm. The plane rolled out straight and I was looking to make the mid-field left turn off for a taxi back and some pattern work. As I applied the brakes the plane started to pull to the right (about a 20-30 degree turn to the right of centerline). I pushed left rudder repeatedly but to no effect. There were no indications of any failures (no noises, or control feel changes, just no change of aircraft state.) It is possible that as the right pedal came back (from pushing the left forward) that my foot did not come all the way off the right brake...? As it became apparent that I was going to depart the runway surface I increased brake pressure on both pedals, when the right wheel left the runway the brakes locked up. I was very surprised that the tail came up, and didn't realize what was happening until the prop hit the ground. I was even more surprised that the aircraft continued over on its' nose, at this point things seemed to happen at a slower pace. As I started to continue over, I turned off the magnetos then turned the fuel selector off. As the plane came to a rest inverted I secured the battery and released my 5-point harness, catching myself with my right hand. The plane came to rest off the right side of the runway but with the left wing still on the runway by about 3 feet. There was damage to the propeller (one blade hit under power, the other was bent in the rollover), spinner, cowling, top left wing tip, right "N" strut bent and vertical stabilizer and rudder crushed. 911 was called by the flight school owner and police and fire departments arrived on scene within 10-15 minutes. State police showed up later and took a report. The airport owner (Larry Waltrip) used a piece of heavy machinery to move the airplane and open the field around 4pm.					
OPERATOR/OWNER SAFETY RECOMMENDATION <i>(How could this accident/incident have been prevented?)</i> I know of no recommendations that could have prevented this accident.					

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
