Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Regarding the gear, the gear resisted when touch the runway but it collapsed as soon as the plane went to the grass. Regarding the propeller it was damaged as soon as the frontal gear collapsed. Airframe its damaged too because of the collapse of the gear too

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight was a Hour Building flight during the afternoon, after reviewing all data available, during the weather briefing the instructor stated the best recommendation was a short flight. We also checked the weather by ourselves in AWC. After confirming weather was good we took the decision to depart, the runway in use at that time was 11. We both conducted preflight in the plane before departure, we went to the run up area and checked using the checklist, at that time everything was looking good on the plane. In a busy pattern we took off and confirmed everything was looking good on the roll, we rotated and as soon as we reach 200ft we felt the engine was having roughness and loss of RPM and also we started losing altitude. Immediately we conducted the checklist and decided to make a right pattern to avoid traffic and mention in the CTAF our intentions (right pattern because of engine shaking). Around 400ft we were able to turn from right crosswind to right downwind. Since we were not able to maintain altitude we decided to take to plane to the opposite runway (29) and we took the plane to the runway, the airspeed increased too and we touched the runway by half of it. The airspeed was greater than 90 knots and the plane was in landing configuration. We looked for aerodynamic braking but we had no enough runway so we started using brakes. A side load at the moment of the landing took the plane into the grass and that when the damage happened. The shut down checklist was completed and by that time a instructor from the school was approaching to us.
