NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

'we' and 'our' is in reference to me (Dana Gibson, PIC) and N178EP (the helicopter involved in the crash):

My flight plan was to fly from Sevier County Aviation (KGKT) to Tri-Cities (KTRI) for a planned 3- approach before departure to Greenville (KGCY) where we would refuel before heading back to KGKT:

My planned TAS was 70-75kts at an altitude of 2,500-3,000. The flight from KGKT to KTRI went as expected, no abnormalities, weather went as predicted. I made contact with both Tri Cities approach, and tower, where we then completed my 3 approaches on runway 05. After we completed the required three approaches, we departed the pattern heading to KGCY. Before totally leaving the airspace, I had trouble with getting onto the given departure frequency, where I then communicated with the tower and they gave me a frequency. I contacted that frequency, let them know my troubles, and they approved my departure and terminated my radar contact. I did not change off of that frequency. I planned to stay on the frequency simply because it would allow me to hear other traffic in that area and keep me more alert to possible oncoming traffic. Once we were a little bit before halfway to KGCY, I did a final check to make sure I had the proper radio frequency on standby (I did not), I looked on my paper navigational log to see the corrections I needed to make to my heading and altitude, and looked on Foreflight to see my estimated location before I went to put in the frequency for KGCY. I have a habit of slowing down my airspeed when changing frequencies or looking at my nav log, so I pushed forward cyclic to maintain our airspeed and lifted my collective to maintain our pitch. Before I was able to make the change in frequency I noticed my cyclic was pushed all the way forward and when I tried to make a correction and bring it back something didn't feel right. I noticed I was gradually losing altitude and despite lifting my collective up, nothing was happening. I noticed that our rotor RPM's were normal, and my engine oil light had not come on, both are a sign of engine failure. I spotted a field to the left of me and decided to attempt to land there. It didn't register to me that half of that field was a slope. Once I got closer to my landing spot, I tried to slow my airspeed down but before we even hit the ground we started spinning, and that's when EP's tail rotor hit the ground and we crashed.

After the initial crash, I remember unbuckling my seatbelt and trying to get the door open. Once I opened it I screamed out for help twice. After taking a breath, I jumped to action. I gathered all personal belongings of mine, along with the POH, the preflight, and engine start up/down designed for that helicopter. I threw them a good few feet away. I then turned off the magnetos, closed the throttle, and turned off the battery, strobe, clutch, and alternator switches before leaving the helicopter. A man that lived across the street came to me, and I used his phone to dial 911. I instructed 911 to call the NTSB, the FAA (I think), and to call Sevier County Aviation and ask to explain what happened to either Jim Garst (owner), Brian Walker (president), and/or Chad Faulkner (one of the CFI's). Within the next few hours EMS, Fire stations, and other official personnel came to the crash scene. After talking with Jim, it is speculated that after completing my approaches, the CG was moved back or possibly out of bounds, and that is what caused my initial confusion with the cyclic and collective not working how I thought they should be. By the grace of God I am alive, with only a minor concussion, love marks from the seat belt, and a few scrapes and bruises.

This concludes my report.
