Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Bent left main landing gear leg. Loss of nose wheel due to impact with taxi-way sign. Damage to aft fuselage tail cone due to impact with taxi-way sign. Subsequent prop strike and engine stoppage on asphalt runway.
 Damage to one taxi-way sign. One broken taxi-way edge light blue lens.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

See attached document.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I believe that this was an inappropriate phase of flight for a simulated engine-out procedure.

With a nose-high climb attitude (approx 13 degrees according to recorded flight data) the airplane lost airspeed very quickly. Decreasing angle-of-attack prevented stall, but we didn't have enough energy to flare and arrest a high descent rate that exceeded 1100 FPM.

The FAA provides specific guidance/rules for simulated engine-out procedures in multi-engine airplanes ... minimum 400 AGL and Vyse. However, I could find very little guidance/rules for simulated engine-out-procedures in single-engine airplanes ... other than "the impossible turn".

I recommend that the FAA provide specific guidelines to Flight Instructors for conditions and phases-of-flight for simulated engine-out procedures in single-engine airplanes. I believe this would reduce damage to property, injury, and death in simulated engine-out-procedures in single-engine airplanes.
