Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Landing gear collapsed, prop strike

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Summary of Incident:

On December 7, 2024, while practicing takeoffs and landings at Valdosta Regional Airport (KVLD), I experienced a hard landing incident due to an in-flight canopy issue.

Details of the Incident:

While in the pattern, the canopy of the aircraft came partially open. The right front latch held the canopy in a partially closed position until the final approach, at which point the latch came loose, and the canopy fully opened. This sudden occurrence caused an abrupt drop in the aircraft's nose attitude.

As the nose dropped, the nose wheel clipped the grass just before the runway threshold. The main landing gear subsequently made hard contact with the runway and collapsed. The aircraft slid on the runway surface before coming to a complete stop.

Aircraft Speed and Configuration:

At the time of the incident, my approach speed was approximately 80-85 miles per hour.

Post-Incident Actions:

Once the aircraft came to rest, I exited the cockpit. I attempted to communicate with the control tower via radio but was unsure if my transmission was received. I gathered my belongings and observed the airport fire department approaching the scene.

I informed the responding fire department crew that I was experiencing pain in my lower back. Emergency Medical Services (EMS) were called and took me to the hospital.

Contributing Factors:

The aircraft canopy has three locking mechanisms: two side locks and one main lock at the rear of the canopy. Upon reflection, I believe I secured the two side locks but inadvertently failed to secure the main rear lock before flight. This oversight likely caused the canopy to open during flight, ultimately leading to the incident.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
