Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Damage to our left wing, the edge of the wing had multiple cuts from the other aircrafts propeller and the top of our wing had multiple dents due to the impact with the other aircraft. The other aircrafts fuselage was dented due to the impact with our left wing and also their right wing had a dent on the top part due to our right tire hitting it.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On December 9th 2024, I Joan Sebastian Briones Diaz, with certificate number

4

acting as a Flight Instructor, departed Fort Lauderdale Executive airport at around 15:15 Local, with the student Simon Alberto Martinez, with certificate number working towards his commercial certificate and a student pilot, Luis Alberto Ramos in the back seat.

T

he lesson for that day had the main goal to improve his landings, since FXE is very busy, we decided to go to PHK. On our way there, we brief our plan of action, since PHK is a non controlled airport and we assessed the different risks involved with that. We joined the traffic pattern from the SE overflying the airport at 1,500 feet to figure out the wind direction and determine the best runway to be used, at the time we arrived we assumed that nobody was on the traffic pattern because the frequency was silent for about 5 to 10 minutes after. We also scanned for traffic and we did not see anybody. We did one touch and go, then a full stop taxi back, then another touch and go and before the 3rd touch and go the incident happened. We were communicating all our position reports, turns and intentions.

W

e took off planning on doing our last touch and go, that would have been the third one. We did not hear anybody talking on the frequency apart from a Cessna on the ground and someone at La belle airport. We reported our intentions of doing a short approach once we were

o

n the downwind abeam the numbers, and we also reported the turn to final. At around 16:20 Local, we started our descent to land and when we were on final at about 350 feet I hear the backseat student pilot yell the words "wtf" and I instantly saw an airplane on the left. I instantly grabbed the controls trying to bank to the right in order to avoid it. The impact happened a few seconds after, as soon as we impacted the aircraft I drifted about 10 degrees left of the runway 18 making sure the other plane was able to land safely. We still had some space to land at the end of the runway. Since the integrity of the airplane was compromised, I didn't want to perform a go around. When I saw that they were okay on the ground, I turned back to the runway and landed in the last portion of the runway, as soon as we touched down I applied full brakes stopping at the threshold of runway 36, within the runway limits. We were able to taxi to the ramp without any further issue.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

The incident could have been avoided if the other aircraft reported what they were doing and their intentions in the traffic pattern or at least listened to the frequency, also we could have focused more on scanning for traffic, even tho we were but we still were not able to see the traffic.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Total Time/ Cycles On Part

_____ Hours
