Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Ferry flight of N8516V started at 50F at approximately 1430z on Wednesday December 18th, 2024. En route to KFXE flight was supposed to take about 6:15 hs. Operating ferry fuel system the endurance was 9:45 hs.

The flight was conducted on the entire route on VFR Flight Following.

I called ATC and started my descent on a 600 ft/m rate. When I was maybe about to cross 9.000 MSL the plane made a sudden violent yaw to the left, for which I applied full rudder to the right to counteract this force. The pressure applied on the right pedal wasn't enough to stop the yawing. I tried to apply right aileron as well which made the yawing slow down but the plane kept spinning to the left. From then on I tried several action while I was descending rapidly into the ground. Gave Miami Center a MAYDAY call, soon after that. Adding power made it worse. Trying to level wings made it worse. When I tried to idle made it even worse because at that point I had a stall warn buzzing so I was afraid to enter on a flat spin. So kept my right wing down intermediate power maybe around 800-900 ft/lb Torque and made me my way down to the ground, in the less unstable condition, but always yawing left with no chance to aim to any specific point such as roads, free-of-obstacles terrain or runway whatsoever. At some point before impact I pushed forward the Emergency Dump lever to jettison the fuel I had left on the hopper. Soon after that I start hitting the trees, banked to the left and yaw on a 180 degree trajectory most likely because of hitting a big tree with my left wing. And the plane just stopped there standing on the main wheels. The engine was on, and windmilling with the prop tips folded back. So I shut it down and jumped out of the plane as fast as I could.
