Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed from KCEY at 1500 CDT conducting a Multi-Engine Commercial Checkride in BE95 N755RP. I was in the right seat as a Designated Pilot Examiner. As per FAA regulations, I briefed the applicant that he has sole PIC responsibility. I was for all intents and purposes, to be treated as a non-flying passenger. Flight was local, under VFR conditions. Weather was clear, light wind. No services received as KCEY had suffered a lightning strike and the fuel pumps were out of service. The aircraft is a school plane, and was fueled the day prior. Terrain is typical for southern Kentucky, flat with farm fields and trees.

At 1535 CDT we departed KCEY runway 23 with the intent to complete a simulated engine failure after takeoff, per the ACS. At 1000' AGL I simulated a right engine failure and the applicant ran through the required flow and checklist up to a simulated feather. I set simulated thrust as required and the applicant turned downwind to establish the aircraft in a left hand traffic pattern. During the midfield downwind segment of the pattern, the applicant began calling out required items. I was looking out the pilots and left-rear passenger windows watching runway spacing. I recall the applicant say "gear" followed shortly by "flaps." As I was already looking out that window I did notice flaps deploy to approach settings. At the time, I did not visually verify gear had come down. The applicant proceeded to continue configuring the airplane and turned base and final with appropriate radio calls. As with all multi-engine checkrides, I instruct applicants to bring the non-failed engine and the simulated-failed engine throttles back together when going to idle in the event of a go-around. This ensures the applicant has both throttles in hand in the event of a low-altitude balked landing. The applicant retarded both throttles to idle during the flare and subsequent no-gear touchdown of the aircraft on runway 23. The applicant was stunned by the event and unresponsive to my directions to secure the magneto, generator, and battery switches on the pilots side of the panel. I proceeded to bring all levers to cutoff/idle, and reached over to shut off magneto, generator, and battery switches. We then exited the aircraft at 1350 CDT on Runway 23 at KCEY with no injuries. I contacted my FSDO managing specialist, the Louisville FSDO, and the NTSB national hotline shortly after exiting the aircraft.

As a matter of note, the throttle gear warning horn worked during subsequent simulated engine failures during the airwork portion of the checkride. During short final, when the applicant brought both throttles to idle, neither of us heard the gear warning horn go off.

Up to the point of the accident, the applicant was doing very well on the checkride. He was very vocal and methodical with all aircraft configuration changes. I believe that this led to me being comfortable and complacent in the aircraft as the examiner. I heard everything correctly, just did not verify the gear during the downwind as I should, required crew member or not.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
