Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Propeller was destroyed. Bottom of the aircraft composite surface was damaged. Main landing gear doors damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Jan 5th, 2024, I planned a VFR flight in N160MH with my two children, ages 13 and 11, to transit from Page Field in Fort Myers to home airport of Norfolk Intl. Fuel was topped off at Fort Myers prior to the flight, about 65 gallons total. Weather was VFR the entire distance. Plane on preflight was normal. Plane on runup and checklists was normal. Gear down and locked prior to takeoff with G3X connection. Takeoff and climbout were normal. Flew a dogleg along the coast primarily by gps. I use a combination of G3X, GNX-375 in the plane, as well as separate iPad with Foreflight. Gear up and locked entire flight. On descent into Norfolk, flew to a left downwind for runway 23 at KORF. Followed normal procedure, slowed to about 110kts, lowered the gear with down and locked indication on the G3X, as well as typical increased cabin air flow from the open doors. Flew normal left approach, slowed to about 90 kts at 200ft, then idle with the field made. Winds were from the right at about 6kts with gusts reported to 18kts. I used crab technique until near touchdown about 75kts, then took out the crab and flared landing. Soon after touchdown, felt abnormal vibrations and loss of directional control. Tried applying full available rudder and brake to counter crosswind. The plane continued an uncontrolled slide and drifted left until coming to a stop at the left edge of the runway. We immediately exited the aircraft. No physical injuries occurred.

Upon inspection post flight, the nosewheel was entirely sheered and missing at the level of the metal fork. Strut remained intact and locked in down position. Both main gear were retracted to the ground level. The bottom of the aircraft was scraped and damaged. The propeller was sawed off from the ground strike and gear collapse.

The aircraft had a conditional inspection performed at Epix Aviation at Chesapeake regional airport 12/17/2024. No reported issues with the landing gear. Most recent landing gear work performed at Velocity Aircraft Inc in December 2022. Prior to that and before I purchased the aircraft, the airplane was repaired at Velocity Aircraft Inc in October 2017 after a nose gear collapse on landing. Landing gear was inspected and cleared after the repair. Aircraft landing was also worked on at Velocity in Florida in December 2022. Mechanical down lock switch was wired by Velocity at that time. However, after the accident, Velocity reported that the switch is malpositioned and potentially gave false indication of complete down and locked.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Nose wheel sheered off on landing. Main landing gear both then retracted after a down and locked indication.
