- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Multiple impacts on both wings, Landing gear damaged, propeller bent, rear windows broken.

Wood fence multiple posts broken and Minor damage to wood from top of utility trailer both located at the end of runway 28 at 2B2.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On January 10th, 2025 myself and my student departed the Beverly airport at approximately 16:20 local time. We departed the airport to the northeast with the intention of returning after performing some cpl maneuvers. We spent some time maneuvering around the area of Ipswich and Plum Island. At approximately 16:45 local time I initiated a simulated engine failure in the vicinity of 2B2. My student selected runway 28 based on the current wind and our location. After following his emergency checklist he determined that we were too high to proceed directly to the numbers. Since we were perpendicular to final, we elected to do a 270 to intercept. As we continued the approach everything was looking good, but flaps were added too soon as the height of the obstacle at the end of the runway was misjudged and we got slow over top of it. I attempted to add full power to initiate a go around, but I was too late and we struck the top of the trailer at the end of the runway. That caused the plane to pitch down into the fence. We proceeded past it and settled to the runway. At that point I cut the throttle and the mixture to stop the aircraft as quickly as possible. The aircraft slid off the right side of the runway and settled in some tall reeds. My student and I exited the aircraft and determined that we were both completely uninjured. Local airport staff called emergency services and local fire, ems, and pd took charge of the scene.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

At the preflight briefing we should have made it more clear who was flying and that either one of us could have ended any maneuver at any time. This would increase the safety and reduce the need to rely on reaction time.

We could have ended the simulation before we got into ground proximity to increase safety margins and avoid undue risk.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Multiple impacts on both wings, Landing gear damaged, propeller bent, rear windows broken.

Wood fence multiple posts broken and Minor damage to wood from top of utility trailer both located at the end of runway 28 at 2B2.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I left Beverly Airport with my instructor, Ryan, around 4:05–4:15 PM, and we headed to the northeast practice area. We performed commercial maneuvers, and afterward, while flying north, Ryan brought the power to idle and said, "Engine failure."

I followed the correct procedure for such a scenario:

- A. Airspeed at 73 knots.
- B. Best place to land, choosing Plum Island (2B2) at my 10 o'clock position.
- C. Completed the Checklist.
- D. Declared an emergency by simulating 121.5 on the radio and 7700 on the transponder.

After completing these steps, Ryan asked if we were high or low for the runway. We were left base of runway 28, and I responded that we were high. Ryan then asked what we should do, and I responded that once I turned to final, I could perform a forward slip. However, Ryan instructed me to execute a 270-degree turn to lose altitude, instead of doing a forward slip.

I followed his instructions and entered the final approach for runway 28. As we approached the runway, it was getting dark. I added one flap, and right after, a second flap. I noticed we were getting too low and suggested going around, but Ryan told me to wait. Right after, the airplane clipped the fence, and after we clipped the fence, Ryan tried to add power but it was too late, and the airplane continued descending striking the runway. The airplane skidded into the grass, and came to a stop.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

1. My instructor should not have simulated an engine failure when it was already getting dark.
2. We should have discussed whether we would do a full stop landing or a go around before commencing the approach.
3. I should have done the slip forward instead of 270-degrees turn.
4. If I have followed my instincts and executed the go around, this incident would likely not have happened.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
