Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The engine and cowling were separated from the fuselage. The propeller was bent. Both wingtips were bent upward. The right wheel and nose wheel were separated from the aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The pilot flew N84048 from 12:53 to 14:23 practicing maneuvers in preparation for the practical exam that was scheduled for 3/5/25. He departed on Rwy 02 at 12:53 because winds were 300/08 as reported by the ASOS at 1744z. When he returned, winds were reported as variable and the runway in use had changed to Rwy 20, so he landed on 20 and taxied to the tie-down area. Upon reaching the tie-down area, there was 30 minutes left on the aircraft reservation, so he resolved to do some pattern work in the remaining time. It is believed that the ASOS was reporting winds from 270 at between 4 and 7 knots on departure.

The aircraft, N84048, was configured for and in the process of making a normal approach to landing on Runway 20. There was a right crosswind. At touchdown, the aircraft was displaced to the right from its alignment with the runway. At that point a precautionary go-around was commenced; however, the aircraft rolled slightly to the left and the left wing dropped and apparently scraped the ground. Then, the aircraft contacted the ground. The pilot shut off the fuel, magnetos, and master switch and evacuated the aircraft.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Focused training on crosswind landings would help. Because I avoided sub-optimal weather conditions during my training, there were few opportunities to repeatedly encounter challenging landing conditions and create instinctive reactions. On the day of the accident, winds were variable and had required a change from Rwy 02 to Rwy 20 during the prior 90-minute period. Although my instructors demonstrated crosswind landings and talked me through them on the relevant occasions, I would benefit greatly from repetition in sub-optimal landing conditions to develop better control of the plane with rudder and ailerons.
