DAMAGE TO AIRCRAFT AND OTHER PROPERTY**Aircraft Damage**

- ☐ None ☒ Substantial
☐ Minor ☐ Destroyed
 ☐ Unknown

Aircraft Fire

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Aircraft fuselage repairable, engine motor mounts all appear not broken, left wing complete rebuild or replace, right wing unknown damage repair or replace, tail surfaces, rudder and elevator all undamaged, vertical and horizontal stabilizers repairable. No outside property damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 02/11/2025 at 9:30 AM, prepared aircraft for short duration flight estimated to be half hour practice winter flight. Observed weather as good and clear with wind WSW 5-10 knots, observed flight school using runway 02 and noticed that there was a slight tail wind for 02, but decided to use runway 02 and blend in to prevailing traffic pattern. At 9:35 prepared airplane preflight, fuel ten gallons, sump and stick check fuel level, oil check read 3.6 quarts (note: holds 4 quarts). At 9:45, start engine, oil pressure 50 psi, oil temp 70°. At 9:52, started taxi to 02 runway. Proceeded to do mag checks, which were okay, approximately 50/50. Set carb heat on. At 9:57, take off on runway 02 annunciated on 122.8 "right turnout, rolling". At 9:58, outside air temperature 10° F. Proceeded to complete some turns at 1650' over Hampton Beach. At 10:01, oil pressure 40 PSI at 120° F. At 10:02 AM, proceeded to Route I-95 tolls at 1743'. Put on carb heat over I-95 tolls and set trim to landing position. Attempted first landing on runway 02, felt like sink rate high and felt like I had possibly a downwind condition or a carburetor icing condition based on the sink rate and aborted landing. The carb heat was already on full, climbing rate very poor, maybe 200' per minute, usually 1100' per minute minimum. Climbing rate seemed marginal, had to make decision to proceed back to runway 02 or climb and do 360 degree turn for runway 20, which I thought had better wind conditions. Due to bad climb rate and very unstable flying condition of aircraft, decided to immediately proceed to runway 02 on the downwind leg, normal short approach. When on short final approach for 02, left wing dipping, felt like ailerons not responding. Continued to regain control and within a half second hit tree at 10:09 AM, as verified by videos from house door camera. When stopped, shut off fuel valve and shut off ELT, unbuckled seat belt harness, left door would not open, opened right door, exited aircraft and walked away.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

aileron brackett broke on final approach , aileron brackett made of aluminum and 80 years old shoud be made of steel due to age hardening of aluminum ,

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Possible carb ice on first landing attempt, sink rate too fast and drifting to left. On post crash analysis, noticed left wing aileron bracket broken. Airplane hard to control on go around and before left wing dropped, felt like I had no aileron roll control. aileron bracket broken made of aluminum.
