Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Bottom of the aircraft undercarriage was grinded. No systems were damaged on aircraft. The aircraft was able to taxi back to parking spot with no help.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I had been out flying for an hour out in the Everglades about 5 miles away from the airport. I was coming into KTMB airport for a landing at 1,000 ft. AGL for 27R. While I was on a right downwind I heard the winds had increased to 13 knots at 310degrees. I turned to base after traffic was reported but it was no longer a factor for the landing. I was cleared to land and I was going through my landing checks of getting the nosewheel down firmly in the flare and the power off in order to slow the aircraft down while using my crosswind controls and rudder to keep the aircraft down the middle. I made a flare and for the runway at 85knots slowing to 80 knots and then I brought the power back and I immediately heard a scraping sound. It then hit me I had not put the gear down for the landing. I then controlled the aircraft and brought it to a stop. The time was about 1530 in the afternoon. I turned off all the aircraft systems immediately because I did not want to have an electrical source near my plane if I had fuel anywhere due to the grinding of my undercarriage. Fortunately, nothing was wrong with the fuel or anything else. I was told to not touch the aircraft until the NTSB came and so we waited for them to come then we lifted the aircraft and lowered the gear and were able to taxi back to the parking spot.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

My checklist needs more reinforcement of the GEAR DOWN Decision. I made a mistake in not being more proactive in visualizing the wheels being in the right configuration for landing.
