N5QV Accident Statement

Statement:

Process started Friday morning. My helicopter was due for a 1-10 hour grease purge after the 150hr inspection. When I was informed that they had completed the purge, I immediately checked/inspected the work as a pre-flight inspection. I was out in the hangar fueling up the tractor used to move the helicopters outside. At that time I received a message from the news station that they were getting “antsy” about some footage they had asked us to get. I pulled the helicopter out of the hangar, removed the blade bag while simultaneously performing my final walkaround for any unsecured latches/pins. I got in the helicopter and did my routine before start. The flight path put us primarily in downtown Atlanta shooting footage of 3 locations, a 4th in the Smyrna area, we were contacted over the radio about breaking news which put us back in downtown Atlanta. While on that scene, my fuel pump caution light illuminated. My immediate reaction was to check the fuel psi gauge, it was normal, and I made the decision to immediately depart for KPDK. After entering the airspace, I noticed my fuel level but I made the decision to continue towards KPDK as it was now the most suitable landing spot due to being over highly residential, wooded areas. Clearance was given to go direct to the north ramp, and after crossing over the closed runway 16-34, at roughly 100-150ft AGL and 40 knots, the engine hiccupped and then cut out. I did my best to establish an autorotation. I did a very small flare, noticed a sink, leveled the ship immediately and used any remaining rotor to cushion the landing. After the hard landing, I shut off the fuel valve and battery along with both boost pumps, engaged the rotor brake, and both my photographer (Bart) and I exited the helicopter on our own power. The cause of my accident was due to a poor decision to return to KPDK where I ran out of fuel on approach.

Preventive Reflection:

Although I felt a need to rush, that should never be the case in aviation. I believe that I had a much better option if I had simply slowed down, not fixated on the caution light, and proceeded with my full instrument scan and the use of the 3 P's. I would have been able to recognize the fuel gauge level and immediately put the helicopter down on the marked helipad at the Georgia Convention Center parking lot under full operation of my engine.

Injury:

Both Bart and I were taken to Grady Trauma Center due to the pain I was feeling in my lower back and the height of the fall. We were both released that same day after receiving results from our CT scan. Bart had no injuries detected from the scan. I have a 25% L2 compression fracture in my lower back. Doctor visit this morning was good and the only recommendation was to find a Physical Therapist.
