March 28th I left the Chesapeake Regional Airport after doing a preflight, including a visual inspection of both fuel tanks. Both tanks appeared to be full, per my request to Chesapeake Regional. After takeoff, the oil temp gage went to 270 degrees and then a complete red X. During flight I was monitoring the exhaust gas temps and cylinder head temps, which maintained well within range. This confused me as the high oil temp, as compared to the exhaust gas and cylinder head temps did not align. As a result, I ran it full rich, approximately 14 gal per hour. Prior to take off, I reset the fuel quantity to 42 gal. With 20 minutes of flight left the engine stalled at 8,000 feet. I immediately contacted Florence requesting vectors to the nearest airport. After receiving the vectors, I attempted an emergency landing at the Bennettsville Airport.
