Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Front part of hull cracked and allowed water to enter, sinking the aircraft. In addition, four of the aluminum tubes supporting the cockpit section were bent. The aircraft was recovered and the engine was flushed, cleaned, and started.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight departed from 08A at 17:45 for a routine sight-seeing flight. Weather conditions were ideal with blue skies and calm wind. The flight was over the Lake Jordan area and 3 water landings were made including one to full stop. After 45 minutes the pilot decided to return to the airport. The pilot deviated from his standard operating procedure by lowering the landing gear when leaving the lake area. Landing gear is usually lowered when entering the pattern. When the aircraft reached the airport there was still 40 minutes of daylight left, so the pilot decided to make one final water landing on a nearby section of the Alabama River. On approach, the pilot lowered the flaps to 10%, but forgot that the landing gear had already been lowered and neglected to verify the position of the gear. Upon touchdown the increased water drag of the gear forced the nose down into the water forcefully enough to compromise the hull and brought the aircraft to a rapid stop. Due to the incoming water, the pilot and passenger were forced to exit the aircraft and swim to shore. The aircraft filled with water, inverted, and floated downstream where it came to rest about 1/2 mile away on the shore in the first bend of the river.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

The pilot should never deviate from established approach procedures.

The pilot should never rely on memory for important checklist (GUMPS) and should always use written or electronic checklists,
