NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Both FAA Reports attached via email.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Flown at higher altitude for more available landing areas and more time to fix or understand the issue, (troubleshoot + time increase).
 More aware of specific aircraft model differences (C172e vs. C172s)

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Jenna Jenness FAA Statement:

Preflight Check looked good. Full fuel, sumped no water or bubbles, oil at 7 quarts. Exterior of aircraft, lights, etc looked good for preflight. I have flown this specific aircraft one time before but about 3-4 months ago. It's an older model 172E. I saw that the fuel selector placard looked different then the other 172 models I have flown and remembered that from the last time flying this plane 3-4 months ago. Daniel the other pilot, flew this exact plane the day before. We briefed about the fuel selector before starting the engine because I remembered the placement and placard looked odd from other 172s and this plane had differences then the 172s I have flown before. Manual flaps, bubble windows, and fuel placard for selector. So I made sure to brief everything before engine start. We made sure it was selected on both before engine start.

Daniel and I, and three other planes were following a flight plan overflying the keys from KHWO. With a destination of KAPF making sure to overfly Homestead airport and the road leading to KAPF. I was pilot flying, Daniel was acting as safety pilot. Our altitude 2 thousand feet, scattered clouds were around 3-4 thousand feet. 2,400 RPM. Our ground speed was about 20 knot tailwind when flying south towards the keys so my guess it was windy. On our way back north from the keys I saw smoke coming from the east and blowing west. We had one plane we were following to our right to the east so I tried to make a left 360 to get behind them and go to the east to not head into the smoke.

When I tried making that turn I noticed the engine sounded silent I leveled back out the direction we were flying. I instantly put on carb heat to see if it was carb icing and put carb heat in after checking to see if it was carb ice. The engine remained silent and I looked and my RPM was under 1000. Daniel let the other planes we were flying with know we were having engine failure on frequency. And he took over controls as I tried restarting the engine and going through the checklist. Fuel selector on both, Mixture was full rich (I didn't lean the mixture because we were at 2,000 ft in cruise) carb heat was in. Alternator battery on, I tried restarting the engine twice. Engine remained silent.

Daniel picked the best place to land and had controls we both decided landing on the road wasn't a good choice due to power lines. We saw a small patch that looked to not have tall grass as our landing spot. We both switched off everything the mixture lights and mags, etc. Daniel switched off the fuel selector. The other planes we were following saw us go down. They were circling us and called on guard. They texted me a number for Miami center where I talked to supervisor Ronald who stayed with me on the phone until the rescue helicopter rescued us. I have no injuries. Just a bruised shoulder, Daniel has a broken nose. We're happy to be alive.

Daniel Martinez FAA Statement:

I was in the right seat acting as a safety pilot. We were doing a time-building flight, and Jenna was the pilot in command.

We were flying near Homestead when Jenna asked if I had felt something unusual. I said no, and she mentioned the engine felt off. Moments later, the engine stopped producing power. There was no jolt or vibration, it simply went quiet. We began troubleshooting using the emergency checklist. We applied carb heat, checked mixture and throttle, fuel, and attempted a restart, but had no success. We noticed the RPM had dropped and we were losing altitude.

At that point, we were close to the ground. I saw what appeared to be the best available landing option and took the controls. The approach was fast, and the nosewheel sank into soft terrain, which caused the aircraft to flip. After landing, I turned the mags, master, and fuel selector off to reduce fire risk.
