

Performed standard pre flight  
and run up.

Taxi'd to runway.

Aligned plane to runway and  
increased throttle for take off.

Crosswind from <sup>320</sup>~~230~~ pushed  
plane right.

Compensated with rudder. to  
~~be~~ move left. on center line  
then

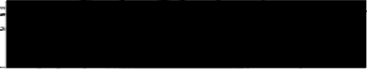

Maintained ailerons to  
account for crosswind.

Met center line & applied more  
right rudder.

The left wing tipped up,  
and I applied left ailerons.

The plane turned left ~~on~~ off  
~~on~~ the runway.

I pulled the throttle to idle  
and could not return the  
plane to the runway.
