Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Deer Struck the plane in the left wing, there was no indication from inside the plane that the wildlife had struck the propeller.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The student and I were doing crosswind landing practice to prepare him for his checkride. We were using runway 26 at DKX. We started out flight around 11:00 am and were about 45 min in the pattern is when the accident occurred. After the 5th landing we took off again for another lap in the pattern. On short final I as the Instructor scanned the runway environment for anything to cause a go around and saw nothing. At this point I noticed my student starting to get blown to the edge of the runway and brought my focus back on helping him maintain centerline. After we had touched down on the runway and started our rollout slowing down using elevator pressure before braking is when I saw 2 deer run out of the treeline to the North of the runway. They were full speed running directly towards us. I made the quick decision to apply full brake pressure and throttle was already idle. we were able to slow to around 20 knots. One deer made it all the way across the plane, however the smaller younger one hesitated on the runway causing us to impact it with our left wing. After we impacted with the deer we didnt notice any abnormalities with the engine and didnt see any indications that it hit the prop at all. We never lost control of the aircraft and maintained centerline throughout. No airport property was damaged, and we were able to taxi ourselves off the runway and to the ramp where we shut down and got out to examine the damage. No airport services were needed.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

I as the CFI in this incident strongly believe there was nothing that could be done in the moment to provide a better outcome for both my student and I. However I do believe the airport itself can help mitigate situations like this in the future by trying to eliminate the deer population that can occur on the airfield in the surrounding trees. Since the accident the airfield has already started making changes and has since cleared out a lot of the brush where the deer would hide. They have also gotten the help from wildlife resources to come out to the airport at night and eliminate the deer that still reside in the woods.
