- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Aircraft Explosion

- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Right and nose landing gear snapped. Engine appears to be off its mounts. Prop is gone. This was a composite aircraft therefore it is very likely there are fractures throughout the aircraft.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

age 13, and I to fly up to Altoona PA. However, upon discovering that the Altoona TAF called for winds at 11 knots and gusting to 22 knots, I decided to fly to Shannon Airport which had a much more favorable forecast based on the DCA, IAD and CHO TAFs.

We arrived at Warrenton VA airport at about 0945. I did a thorough preflight inspection. We departed with 20 gallons of fuel at 1034 and flew to Shannon Airport and landed at 1059. We had lunch at Robin's Café at Shannon Airport and then toured the air museum at Shannon Airport. After our tour, I did another preflight inspection, and we departed at 1332. We did 5 touch and goes and at 1359 we did our last take off and began to head back to Warrenton Airport. The winds were about 5 to 6 knots from about 230 degrees.

At 1407, at 2041 MSL, we began to experience a tremendously violent vibration throughout the aircraft. This lasted for about 4 to 5 seconds. The shaking was so violent that I was unable to see clearly during the vibration. Furthermore, the shaking was so violent the canopy latches unlatched, and the canopy opened. The canopy in that plane opens and moves upward towards the engine. The engine then came to stop. I then push the stick forward to maintain an airspeed of 70 knots for best glide as per the POH. I told my son to dial in 7700 on the transponder and to grab the canopy to hold it closed but not lock it.

I spotted a field off the right nose, about a ¼ mile away. Realizing that I was way too high to immediately turn to the field, I turned to the left to circle around about 270 degrees to line up with what I perceived to be the widest part of the field. I aimed for the field and began to descend on a heading of about 70 to 80 degrees. I closed the fuel selector valve. We came over a tree line and I deployed full flaps. We came down to the field and touched down. The field was uneven and had some rolling hill contour to it. The nose yawed left, and the right landing gear snapped, then the nose came down and the nose gear snapped. The right wing then hit the ground, and we slid at about a 45-degree angle left of the direction of forward motion on the ground. We came to stop in about 3 to 4 seconds after landing. We stopped at 1409.

My son and I determined that we were not injured save for a minor scratch on his arm. We climbed out and moved about 100 feet behind the aircraft. It took me about 5 minutes to reset my mind and I then called 911. I removed my aviation headsets, iPad and a few other personal items. I noted that the mandatory paperwork for the airplane was gone, and I assumed that it blew out when the canopy opened. EMS arrived about 10 minutes later. They checked us out and left. State police arrived about 20 minutes later.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

It appears that the Prop failed. Hartzell Wood Comp Model: SR200 Serial Numbers: N195A, N195B and N195C
