DESCRIBE EVENTS AND CIRCUMSTANCES THAT LED TO THE LOSS. INCLUDE A SKETCH IF APPROPRIATE. ATTACH ADDITIONAL SHEETS IF MORE SPACE IS NEEDED.

On 6/24/25 at about 1130, I had just taken off and was going to remain in the pattern for a few laps and landings. The weather was as outlined above. No winds, etc. During the first landing and after the touchdown of the two main wheels and as the nose wheel came down, I felt a jolt and the aircraft veered to the left and off the runway and I lost directional maneuvering capability. After leaving the runway, I was moving in the direction of a worker who was cutting grass and I knew I had to do something to avoid hitting the worker. I pulled back on the yoke and applied the breaks hoping it would slow me down. I then gave the aircraft full right rudder and added power to try to change my direction. It was successful and I turned right and back up the slope and moved out of the grass. Unfortunately, as I got to the runway the aircraft momentarily went airborne and came down hard on the nosewheel. It was quite a jolt. I could tell that there was a prop strike and the engine began to run rough, but, never stopped. I was able to maneuver into a position where I was on the edge of the runway and in the grass. I stopped and shut the engine down and secured the aircraft. I inspected the aircraft and found a deflated nose wheel and structural damage to the anterior hull. The on field mechanic brought a tow out and helped me move the aircraft back to our hanger and the aircraft has remained there. An A&P has examined the aircraft and I believe his report has been sent to you.
