Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Substantial damage to: propeller, upper/lower cowling, firewall, doors, nose gear, fuselage, right & left wings, rear window, rudder pedals, cowl flaps & controls, tail, other still be verified upon inspection.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed KHAO @ approx. 9:00am. Flight plan KHAO SGH 89D at 3500msl. Foreflight indicated thunderstorms approx. 50 miles East as we approached 89D. Winds were 220@10 per our cockpit instruments. We arrived at 89D @ approx. 10:20am. Landing on 27 with about a 10kt crosswind was uneventful. We had an early lunch at end of 27 by the beach. We pre-flighted @ 11:15am. Windsock was swinging between 180 and 240 and was straight out. Est'd winds at 10-15knts w/ gusts. Foreflight still showed thunderstorms around Cleveland area.

We departed on Rwy 27 @ 11:30am. Lifted nose at about 56kts while holding partial left aileron. Estimate we were about 800ft down the rwy.. Approx. 10 - 15ft off the ground we were hit with a strong crosswind gust that pushed us hard off the centerline and down toward the ground. Despite full left aileron, I could not re-establish a stabilized climb so I decided to reduce power and let the plane fly back to the ground, before the situation could worsen. I believe this action, and perhaps the Grace of God, saved us from serious injury. We touched down in the grass about 60ft North of 27 CL. I believe the right wing contacted the ground first, then the prop., the nosegear was torn off, and then the Left wing touched momentarily. We skidded to a stop tail high about 100ft North of 27CL and about 100 short of 18/36 CL.

Despite extensive damage to the airplane (probably totaled) Robin & I exited with only minor scrapes and bruises. We were both Airflighted to Mercy Hospital in Toledo (Cleveland was closer but still showing thunderstorms). We were released around 5:30pm that evening and returned home to Liberty Twp..

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

We are sincerely grateful and in awe of the engineers who designed and built our 177B. Despite extensive damage to the plane as a whole, the cockpit remained intact. The 4 point restraints held us securely in place and the seats remained firmly attached to their rails. The fuel tanks did not rupture. WOW what a great plane !!

Although I was cognizant of the potential chance for a strong crosswind, I did not fully prepare for the possibility. Although I made a conscious effort to lift the nose at a little higher GS than usual I was not holding enough left aileron into the wind. I was also aware that trees shielded us from the crosswind for most of our ground roll, and we should expect more crosswind effect as we approached the 18/36 intersection where its more wide open. I let the crosswind take me by surprise and as a result 'got behind the airplane'.
