NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Around 3:55 Pm I departed Red Stewart (401) Waynesville. I purchased fuel. Soon after departure I requested Flight Following and sqk 4244. Climbed to 6500 Ft., I stayed in contact with Indy.Cinci, Lex.centers as directed for the duration of the flight. When approaching (KEKQ) around 20 km out I got weather. About 10 km out I canceled Flight Following sqk 1200 VFR. I descended to 2000 while talking to center following the airplane checklist for descent and approach. I enter the downwind leg at a 45° with a direct crosswind from right to left. I proceeded to turn base leg with one knotch of flaps. When turning to final I did not like my altitude so I performed a go around. While climbing to TPA, I made a left crosswind turn then to down wind. I leveled off at 1900 ft. added carb heat and reduced power. Soon after I started my descent at 500 ft. per minute, I turned base leg while making my radio calls then to final. The approach looked good as I applied my stick and rudder controls for the left to right crosswind I kept the airplane lined up with the center of the runway. Around 5 ft. from the main gears touching down I drifted slightly to the right. I touched down at a safe slow approach speed. I applied left rudder to bring the airplane back to the center line. Then right rudder to keep it centered, I soon realized I had not right rudder authority and proceeded to runoff the left side of the runway. I ground looped the airplane. I come to a complete stop and exited the aircraft around 5:50 pm. Terrain was not a issue and with a 8 kt crosswind. I called the airport manager and within minutes the FAA to report the accident.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Its been suggested to practice slight crosswinds and slowly build up to direct crosswinds and practice, practice, practice.
