Subject: ERA25LA317, Crosswind Component Calculation for runway 030

METAR KEKQ 252156Z AUTO 30009KT 10SM SCT060 23/11 A3010

Difference = $|300^\circ - 030^\circ| = 270^\circ$

A 270° difference means the wind is coming directly from the left, perpendicular to the runway. This results in a full crosswind component of approximately 9 knots.
