

NATIONAL TRANSPORTATION SAFETY BOARD • PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT Use this form (Form 6120.1) to report civil and public aircraft accidents and incidents

BASIC INFORMATION
Accident/Incident Location

 Nearest City/Place: Livermore Falls State: ME

 ZIP: _____ Country: USA

 Latitude: 44-24-36.0000N Longitude: 070-08-45.9000W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

 Date: 08/23/2025 Local Time: 14:30
 mm/dd/yyyy HH:MM

 Time Zone: -4

 Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

 Registration Number: N170JL

 Manufacturer: Cessna

 Model: C-170B

 Serial Number: 25560

 Year of Manufacture: 1,953

 Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Original Design ☐ Kit/Plans

Make: _____

- ☐
- IFR-Equipped and Certified
-
- ☐
- Commercial Space Flight
-
- ☐
- Unmanned Aircraft

 Maximum Gross Weight: 2,200 lbs.

 Weight at Time of Accident/Incident: 1,675 lbs.

 Number of Seats: 2 Flight Crew Seats: 2

 Cabin Crew Seats: 2 Passenger Seats: _____

 Number of Engines: 1
Category of Aircraft
 (Select one)

Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Left wing tip, left main gear, propeller, tail cone and tail-wheel suffered damage.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight was two laps around the pattern. At the start of the first lap the winds were 5 - gusting 10 out of the south, taking off on RW 20. After the first lap, lined up for the second take off. Take off was uneventful with climb out to pattern alt, turn for down wind, turn base and left turn for final. Ground crew advised the winds were getting "Spicy" while I was turning base to final.

While on final, a R44 heli was operating to the west of the field and turned right base between my location and the landing threshold. Ground crew advised the heli to break off for landing aircraft (me).

I chose to make a high approach because of the high trees, slowing the aircraft while descending to the touchdown point.

While on short final I slowed the aircraft while applying 30 degrees of flaps and monitoring the AoA indicator. As I approached the touchdown point 20' AGL, the gusting winds from my 1:00 O'clock died to near zero. I failed to carry an adequate gust factor in my airspeed and as the gust was reducing from the right, the left wing lost lift first, causing the aircraft to roll left. This roll caused a reduction in alt while the left wing tip contacted the ground causing the aircraft to yaw in a left rotation. and the aircraft continued to yaw and lose alt the left main gear contacted the ground while the aircraft continued in its original path, while it had rotated 90 to the left. the main gear slid sideways, at this time the gear attachment point failed and the aircraft continued decent and rotation to the left. As the gear leg yielded the aircraft engine cowl came into contact with the ground resulting in both prop blades being destroyed. AS the aircraft continued to rotate to the left the tail fell and made contact with the ground. The tail-wheel struck the ground and arrested the yaw/rotation to the left, and the aircraft came to rest facing roughly 180 from the direction of flight.

While on short final I made very rapid rudder inputs to maintain direction control, with slight aileron corrections. When the left wing fell, right rudder was fully applied. yoke was pushed forward and power was advanced in a effort to regain airspeed and lift.

The following statement is from a witness of the sequence:

On Saturday, August 23, 2025 I witnessed N170JL crash at B10 in Livermore Falls. The aircraft approached runway 20 in a stabilized configuration at slow speed in gusty conditions. At approximately 20 to 30 feet off the ground and 200 feet short of the intended touchdown point the aircraft, entered the beginning of a stall spin to the left. Subsequently striking the left wing in the runway and rotating the aircraft to the left in a nosedown attitude and coming to rest at the east edge of runway 20.

I can only speculate from my own experience at this runway he possibly was caught in the funneling effect of runway 20s approach. Runway 20s approach and is at the culmination of a large open field area and seems to push the air up at the approach end with higher air speeds experienced during your approach only to be lost as you clear the numbers and enter the open field. I don't believe that pilot skill was an issue because rudder control was clearly evident during the wing stall, and ailerons remained neutral.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

I was operating at an unfamiliar field, and unfamiliar with the local prevailing weather patterns. I am also from AK where the DA is commonly minus 2000 DA. The DA that day was +2200.

I failed to become recognize the DA delta, and the degree of gust changes between laps.

I failed to account for the increase in the gusting component, and was startled by the Heli that turned Right Traffic base in front of me before being advised that I was already on final.

1) I should have made the decision to go around at that point as it interrupted my normal landing flow and caused me to make a higher approach than I planned.

2) I should have been more aware of the ambient conditions and sought guidance from some of the local pilots.

3) I should have used less flap and carried more speed on final (gust factor)

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Total Time/ Cycles On Part

_____ Hours

_____ Cycles

Time Since This Part Inspected/Overhauled

_____ Hours

FUEL & SERVICES INFORMATION

Fuel on Board at Last Takeoff

(Convert from pounds, as necessary)

30.0 Gallons

Fuel Type
