Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

The aircraft sustained substantial damage. The nose section and engine compartment were crushed and displaced, resulting in collapse of the firewall and deformation of the forward fuselage. The main landing gear collapsed, and the aircraft came to rest inverted. Both wings sustained leading-edge damage, skin wrinkling, and structural deformation. The empennage exhibited twisting and bending. The propeller blades showed impact damage. The windshield and cabin structure were fractured and deformed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Statement of Asmar Nurieva

On August 29, 2025, I, Asmar Nurieva was acting as pilot in command of N1607F, a Cessna 172H, on a local flight at New Smyrna Beach Municipal Airport. My husband, Onurcan Unal also a certificated flight instructor, was on board and flying from the left seat. This was our first flight in the aircraft following purchase on August 27, 2025. A pre-buy inspection was completed by an A&P mechanic prior to purchase, and the annual inspection was current. Airworthiness directives were complied with.

Prior to the flight, we conducted a thorough preflight inspection using both the aircraft checklist and our own supplemental checklist. We followed the checklist to check all of the flight control surfaces, interiors and exteriors, flaps, oil & fuel on board. We had almost 7 quartz of oil and 23-24 gal. of fuel (11-12 on left tank and 12 on right). Fuel was sumped from both wing drains and from the strainer. Two small water bubbles were observed during the first sump; the fuel was drained and resampled with a different sump cup. No further contamination was observed. The strainer drain was also checked several times, and no abnormalities were noted.

Engine start was normal. We were parked on the ramp, facing West. We got the ATIS information, did the flight instruments check and contacted ground control. I requested a close traffic(pattern) and ATC told us to Taxi to runway 29 via A,C. I called ATC back asking if we can taxi to the runup area for the engine runup. ATC instructed us to Hold short of runway 29 and do the runup there. We complied with the instructions. As we started taxiing we also did the break check. Taxi, run-up, and before-takeoff checks were completed with no irregularities. I conducted the first takeoff and completed one traffic pattern and landing uneventfully. As I was turning to the right downwind ATC reported that winds were calm. There was an other traffic on the left downwind and ATC instructed to follow that traffic and we got the touch and go clearance. I remained clear from the noise abatement area and started configuring for the landing. I landed with full flaps and carburator heat on. After landing, I retracted the flaps and put the carb heat back in and Onurcan Unal took the controls for a second takeoff while I remained in the right seat.

During the second takeoff, at approximately 100 – 150 feet AGL, after rotation, I reported traffic in sight to the tower. Immediately after this call, the engine abruptly lost power. The throttle was confirmed full forward, mixture full rich, and fuel selector on “Both.” Onurcan Unal attempted to cycle the throttle (idle to full), and the engine momentarily sputtered before complete power loss. I declared a Mayday on the tower frequency.

With insufficient altitude to turn back, we elected to land straight ahead. My husband aimed for a grass area beyond the runway to avoid a river on the left and large trees on the right. During the landing attempt, the aircraft impacted a fence, nosed over, and came to rest inverted. Both of us evacuated the aircraft safely. I turned off the master switch, and he removed the keys. Emergency services responded promptly.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

We conducted a thorough preflight, including checklist and supplemental procedures, and operated the aircraft in accordance with standard practices. At this time, we have no additional recommendations beyond continued adherence to established safety procedures.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)		
Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No <i>(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)</i> Total engine failure		Total Time/ Cycles On Part <u>2228.74</u> Hours _____ Cycles Time Since This Part Inspected/Overhauled <u>291.13</u> Hours
FUEL & SERVICES INFORMATION		
Fuel on Board at Last Takeoff <i>(Convert from pounds, as necessary)</i> <u>23-24</u> Gallons	Fuel Type ☒ 100 Low Lead ☐ Jet A ☐ Unleaded AV ☐ Automotive ☐ Jet A-1 ☐ Other, specify _____	
Other Services, if any, prior to departure:		
EVACUATION OF AIRCRAFT		
Was an emergency evacuation of the aircraft performed? ☒ Yes ☐ No Method of Exit – Describe how the occupants exited and how many occupants evacuated each location: We evacuated the aircraft by unbuckling in sequence. Onurcan unbuckled himself first and then helped me because we were inverted. Then we exited through the right-side door, as the left side was blocked. Both of us exited calmly without further assistance		
OTHER AIRCRAFT – COLLISION (If air or ground collision occurred, complete this section for <i>other</i> aircraft.)		
Aircraft Registration Number _____	Manufacturer: _____ Model: _____	Damage to Other Aircraft: ☐ Destroyed ☐ Minor ☐ Substantial ☐ None
Registered Owner of Other Aircraft Name: _____ City: _____ State: _____ ZIP: _____ Country: _____		Pilot of Other Aircraft Name: _____ City: _____ State: _____ ZIP: _____ Country: _____
ADDITIONAL INFORMATION (Additional space for answers to any question.)		
Statement of Onurcan Unal On August 29, 2025, I was operating N1607F, a Cessna 172H, from the left seat. My wife, Asmar Nurieva also a certificated flight instructor, was in the right seat. This was the aircraft's first flight with us following its purchase on August 27, 2025. A pre-buy inspection had been performed by an A&P mechanic prior to the sale. The aircraft had a current annual inspection, all applicable ADs were complied with, and approximately 60 hours remained before the next 100-hour inspection. Before departure, we performed a detailed preflight inspection using both the aircraft checklist and own departure/crew briefing checklist. Fuel was sumped from each wing. The initial sample contained two small water bubbles, which were drained. A second sump was taken with a different cup, and no further contamination was observed. The strainer drain was also sampled multiple times with no abnormalities noted. The engine started normally, and taxi, run-up, and before-takeoff checks were completed without issue. During the runup we checked both magnetos, carb heat and the throttle idle check(700 RPM). My wife conducted the first takeoff, flew one traffic pattern, and landed uneventfully. After landing, I took the controls for the second takeoff. I verified 2300rpm, airspeed alive and rotated at 60 kts. During climbout, at approximately 100–150 feet AGL and just after rotation, the engine lost power abruptly. Throttle was confirmed full forward, mixture full rich, and fuel selector on "Both." I briefly cycled the throttle from idle to full; the engine sputtered momentarily but then lost power completely. My wife declared a Mayday on the tower frequency. Given the low altitude, I elected to continue straight ahead rather than attempt a turnback. I aimed for a grass area beyond the runway to avoid a river on the left and tall trees to the right. During the landing attempt, the aircraft struck a fence, nosed over, and came to rest inverted. Both occupants evacuated the aircraft safely. I turned off the keys before exiting.		

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE.

I understand that the information provided may be subject to public release.
