- ☒ None ☐ Both Ground and In-Flight
☐ In-Flight ☐ Fire at Unknown Time
☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Aircraft landed neatly on the stringers on the belly of the aircraft. As such there was damage to the stringers (scraping). The flaps were fully extended at landing and so those were also damaged on the inboard area near the fuselage. The nose cowling underside, including nosegear doors and cowling flaps were scraped. The propeller struck the runway on landing bending both blades inward. The exterior step for climbing into the airplane scraped the ground. The exhaust pipe scraped the ground. No apparent damage to airport property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I checked weather on several commercial weather sources. Ceiling, visibility, and winds were VFR and light. I invited my pilot colleague, Cliff Reliford, to fly with me.

Upon arrival at the airport, I conducted a thorough pre-flight. I visualized fuel levels and confirmed fuel was at the tabs. I started the plane, and conducted pre-taxi checklist. I tuned the KMQY ASOS, confirmed weather and set altimeter accordingly. The run-up was conducted according to the checklist and was normal. I secured taxi clearance from Ground and then takeoff clearance (Closed traffic) from Tower (RWY 32).

I flew the first circuit as PIC in the left seat performing a touch and go. Cliff said he wanted to perform the next landing. I retained control of the aircraft. As we turned crosswind, I saw a Cessna on downwind clearly flying at a slower airspeed. To maintain separation, I began reducing power and configuring the aircraft for slow flight to keep pace behind the slower Cessna. Once we were established downwind and were approximately abeam the numbers Cliff announced he was ready to transfer control of the aircraft to him. He announced, "my aircraft", I acknowledged "your aircraft", and Cliff took control as PIC. The tower instructed us to extend downwind. Cliff continued to configure the aircraft for slow flight to maintain separation with the Cessna. But as we reached a position approximately 45 degrees to the end of RWY 32, the tower cleared us to land before the Cessna, with the Cessna still on an extended downwind. Cliff continued to fly the plane on a normal pattern descent to RWY 32. The approach angle on short final followed the PAPI lights. Airspeeds were within POH recommended speeds. The approach was not rushed. Upon flaring, we continued to sink until we landed on the belly of the aircraft. I do not recall hearing or seeing any audible warnings that the gear was not extended. As we slid to stop on the centerline, I reported to the tower that we had landed without the gear extended.

Upon coming to a stop, I secured the aircraft (fuel valve turned off, mags turned off, master turned off) and we exited the plane.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

Garmin could provide audible gear up alerting on avionics. Repeat GUMPS check on short final. Manage distraction of other traffic and tower deviation from expected landing clearance.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
