

MEMORANDUM FOR RECORD

Daniel Boggs
Air Safety Investigator
Eastern Region

Date: 9/30/2025
Subject: Pilot interview_ Jerry Ramsey
NTSB Case Number: ERA25LA373

Mr. Jerry Ramsey was interviewed by telephone.

Mr. Ramsey stated that he and a CFI were out flying for his bi-annual review. The CFI was not familiar with the airplane so they discussed before the flight that the pilot, who also owned the airplane, would be the pilot in charge. After the bi-annual flight review and as they were returning to the airport, they were having a discussion about practicing some take off and landings. During the approach, the pilot forgot to put the landing gear down, and landed gear up. The pilot/owner stated that there were no preimpact mechanical anomalies that would have precluded normal operation. A Federal Aviation Administration inspector examined the airplane and revealed that the airplane had sustained substantial damage to the fuselage and bent the airframe empennage.
