Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Aircraft: From what I witnessed and what I've been told the aircraft is totaled. Main impact in the front of the aircraft with a tear in left wing from impact with transmission power line.

Property: A cut transmission power line and scratching of the dirt surface on the field we landed on.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

We arrived at the airport at 11:30. Upon arrival I checked my ForeFlight to see the weather from the KHTS ATIS. Afterwards I did my preflight inspection, checking aircraft electric functions, walk around, visually checking and sumping fuel (7 gallons in each wing), checking oil (6 qrt), and checking electric engine gauge to see fuel matched what was shown. After that I checked ForeFlight for how long it would take to get to my destination (KFFT), which was 1 hr and 4 min. Which gave us a half hour reserve fuel for the flight.

Then we started the airplane, did my usual run up for the aircraft which all gauges showed correctly. We back taxi'd to our departure (RWY 25) and departed. Upon reaching 2,500 ft we leveled out and set for cruise configuration, after which our gos showed it would take us 47 minutes to get to our destination. I checked engine gauges again and we still had enough fuel for our flight plus 30 minute reserve. Our indicated fuel burn was 10 gal an hour. After setting up the configuration I listened to the KHTS ATIS again for the altimeter setting. For the first 20 minutes of our flight we experienced some light turbulence but calmed down as we got further out.

From takeoff about 50 minutes into the flight we heard engine roughness, a decrease in rpm and manifold pressure. I reacted by pushing the mixture to full rich, props high, and full power setting. I checked the engine gauge and saw that our fuel pressure had significantly decreased, even though we still showed positive fuel and an estimated 27 minutes until empty. I turned the aux fuel pump on which momentarily helped. At the first decrease in pressure I turned to an alternate at Cynthiana (018). The entire time the engine was still running and giving us power, at our airspeed (100 kts ground speed), altitude (2,500), and distance (7nm) from the airport we could make it to the Cynthiana airport so I committed my landing there.

When we got closer to the airport (5nm) there was further fuel pressure drop after the aux pump was turned on. This significantly decreased our airspeed and caused us to sink faster. At this point I had to find a field to land in for an emergency landing. I found a field and committed my landing there, but when we were close to landing suddenly power lines came into view that couldn't be seen before due to field discoloration. From how close they were there wasn't time to try and out climb it or go under it, so I flew in between the lines. We were successful in this until the left wing got caught on a transmission line that was on a down arc between the other lines. While all this happened the engine was still running, as we hit the line we got caught and crashed to the ground at 70 kts indicated.

After the crash in a look around the left wing and front of the aircraft is only what appeared to be damaged.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

It is my belief there was a mechanical failure somewhere in the fuel system. As all of a sudden our fuel pressure decreased, but all the way down until the ground the engine continued to run. Just not with sufficient power to maintain flight
