Good afternoon, Aaron

I believe the dipstick was calibrated but I'm not sure, I did not get it calibrated after buying the aircraft. The plane was on level ground. As to the kind of sticks I'm not really sure what to say other than it was a dipstick that you stick into the tank and cover the top with your finger and look at it that way. Unfortunately, I do not have the stick anymore to check and see.

Afternoon [REDACTED]

Regarding the sticking of the fuel tanks. Can you tell me if the sticks were calibrated? Was the airplane on level ground? What kind of sticks were used to confirm the fuel sir. Thank you.

Aaron
