Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Tail boom skin wrinkled and malformed.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed the Wetumpka base with trainee pilot flying at about 22:47 and flew to the Wetumpka airport (08A) to train maneuvers in the traffic pattern (autorotation's, quick stops, hovering autorotation's, slopes, etc). He performed a few traffic patterns completing a quick stop, some normal approaches and a couple of autorotation's with power recovery. We then hovered into the sod area adjacent to the runway and after a briefing about the maneuver, completed 4 hovering autorotation's.

The first hovering autorotation was ok but he drifted slightly right about 3-4 feet and had a heading deviation of about 15 degrees to the right. I debriefed the maneuver and gave an assessment and corrective instruction. A second one was performed. Heading and drift control was better, but the touchdown was more pronounced and not as cushioned as the first. I debriefed the maneuver and offered additional corrective instruction regarding heading and drift control, and I commented that landings tended to be less abrupt and gentler when performing the maneuver at lower hover heights. (I estimated his hover height to be about 4 feet AGL at initiation). The third and fourth maneuvers were markedly improved, with drift and heading more controlled. The last one was completed well within standard with very minimal drift and heading deviation and a very gentle touchdown.

We then began IIMC instrument recovery training with me giving him instruction on setting up the avionics for an instrument approach, and then having him perform the RNAV 9 approach into the Wetumpka airport. At the completion of the approach we departed for scene/off-airport/LZ training, then flew a simulated patient transport to Baptist Medical Center South. From there we flew to the Alex City base, the Tallassee hospital helipad then returned to the Wetumpka base for termination of training.

No services were obtained.
