Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Prop strike, left wing contact with bushes, skin damage to cowling, wings.
Fuselage intact, no broken windows.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Thursday 11/6/2025, I ^{around 15:30} ~~was in~~ ^{entered} the K0XC pattern to practice ^{2 simulated} emergency engine out landings, a.k.a. Power-off 180s. This was in preparation for my commercial checkride scheduled for 11/10/2025. Skies were clear, winds reported by the tower as 300 at 6kts, gusting 17kts. Runway 36 was in use. The first pattern was left traffic and the Power-off 180 was smooth and ended as a touch and go. Tower ^{then} called for right pattern. On downwind abeam the 1000ft marker, I pulled power to idle, set flaps 10, pitched for 75 kts, and turned base soon after. I was low ^{so} and I pitched for 65 kts and pointed towards the numbers. I added a little power to maintain altitude. As I approached the numbers at ~100ft AGL, I began my turn to final and noticed the plane start to overbank (I later realized this was due to the X wind gust). I applied left aileron but the bank continued to increase, reaching ~45 degrees. The plane began losing the vertical component of lift and the nose started pointing down. I was on my 65 kt target airspeed so I did not stall, but I was only about ~50 feet AGL at that point and could not recover in time. The nose, right main gear and right wing tip hit the ground. The plane bounced and floated, and then contacted tall grass and came to a stop in the tall bushes about 50-100 feet beyond that point. The prop stopped on contact, and there was no fire. The impact was gentle due to energy being distributed over a long & soft area. I walked away without a single scratch, the plane was damaged but intact. (End)

I should have started with "I departed KDXR at 14:58 EST for a ^{solo} training flight."

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

I recommend requiring simulator training for students to experience stalls, and unusual attitudes due to wind gusts/wake turbulence/LLWS at less than ~~1000~~ 500 ft AGL. All these are performed at high altitudes during training and the sight picture doesn't adequately simulate the seriousness of the situation. It may even downplay it, giving a sense of benignness. Actually seeing the ground rushing up, (or even experiencing hitting the ground) may be more realistic in ingraining proper muscle response, and also inculcating the dangers of low altitude maneuvers in gusty conditions and ~~stress~~ the importance of avoiding them.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
