Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed F47 at approximately 14:30 eastern time to practice straight in instrument approaches at F47. I was comfortable with ILS and RNAV but hadn't done the straight in with glide slope on my Garmin 1000. I came around island and lined up and did approach at approximately 15:00. The glide slope was much steeper than what I was accustomed at F47 when in pattern. I slowed below my typical landing speed -so I then accelerated to gain speed, and the plane gained altitude over the beginning of runway-I then decided to just go around and accelerated the plane and it stalled. Instead of using proper stall procedure (nose down) I -being close to ground -pulled up. The plane pulled hard to left (p-factor) and stalled completely and rolled to the left. The plane landed right side up in the marsh east of runway. I believe it cartwheeled but I'm not sure. The nose cone and front tire was broken off and lay 5 feet in front of plane which was facing north. The tail was broken off. I was able to open door and leave the site. Upon crashing, I walked back to my golf cart and went to my house. I was contacted by coast guard due to ELT activation. I let them know I was uninjured. I then contacted AOPA who advised me to contact NTSB who contacted FAA. I notified insurance company, and I believe recovery occurred 11/23/25.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

This accident was pilot error. It could have been avoided by proceeding to land. It could have been avoided if I had executed the go around earlier and at a higher altitude. It could have been avoided if I had properly followed my training and put nose down at first indication of stall. That might have caused a prop strike, but not a crash.
