Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 12/7/2025, at approximately 1:59 PM EST, the pilot departed runway 28 at Cape May County Airport (KWWD) in a Cirrus SR22, registration N19SK, with three passengers onboard, for a local flight to Wings Field Airport (KLOM). After departure, the pilot requested VFR flight following and conducted a practice RNAV (GPS) approach to runway 24 at KLOM.

During vectors to the initial approach fix HOMWE, the pilot experienced difficulty activating the approach on the avionics. As a result, the pilot discontinued flight following and continued the straight in approach visually while hand-flying the aircraft. The approach was stabilized with an indicated airspeed of approximately 81 knots on final. According to post-flight Cirrus Approach App data, the approach received a score of approximately 98 percent, with an average glidepath of approximately 2.9 degrees. The aircraft was fully configured for landing by approximately 500 feet AGL.

Surface winds were reported as approximately 7 knots from 270 with a slight crosswind from the right. The aircraft was loaded with three passengers; the heaviest passenger was seated in the rear right seat, resulting in a relatively aft center-of-gravity condition. The pilot perceived the pitch response during the landing phase to be more sensitive than usual.

During the landing flare, approximately 5 feet above ground level, the aircraft experienced an aerodynamic stall and touched down firmly, resulting in a bounce. At that time, the aircraft was left of the runway centerline with a slight left bank. Concerned about the aircraft's lateral position and the potential to depart the paved surface to the left, the pilot elected to initiate a go-around rather than continue the landing.

During the go-around attempt, the pilot applied power but believes that insufficient forward elevator and right rudder input may have been applied. The plane speed was also already slow and the plane was heavy. The aircraft became briefly airborne but remained within approximately 5 feet of the ground. The aircraft yawed and rolled to the left, entering a slow, uncommanded left rotation. The left main landing gear contacted a concrete drainage ditch adjacent to the runway and taxiway area, resulting in substantial damage to the airframe. There were no stall warnings heard.

The aircraft came to rest left of the runway and taxiway. There was no post-impact fire. The pilot and all three passengers exited the aircraft without injury. The aircraft sustained significant structural damage. +
