Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Substantial damage to both Lycoming engines, Both propellers were bent / rolled. The airframe sustained many scratches and skid marks to the underside of the fuselage and wings. Flaps were set at 20 degrees at the point of touch down and were forcefully moved back into a 0 degree setting.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The incident at Walker County airport began normally. It was an MEI student; I [REDACTED] was in the left seat, and [REDACTED] was in the right. We were in a Beechcraft Travel Air. (N95DJ) After a successful run-up check, we taxied to runway 27 for a VFR departure to the North practice area. We had taken off with no issues and climbed to 5,500' to practice maneuvers. Performed steep turns, power on/off stalls, accelerated stalls, VMC demo, unusual attitudes, and full engine shutdown and restart. Once we had completed the maneuvers, we set up for an instrument approach back into KJFX. The RNAV 27 was the approach we performed; we practiced a simulated single-engine approach. The right throttle was pulled to idle to simulate a loss of the critical engine. During this, the circuit breaker for the throttle horn was pulled. After a successful landing on runway 27, we taxied from A1 back to runway 27 at A3. Departed 27 for left closed traffic to practice short field landings. Once we were abeam the thousand-foot markers, we started the before-landing checklist. This was performed from memory, and the actual checklist was not used. I [REDACTED] was focusing on communicating with incoming traffic. There was another Travel Air inbound on the VOR/DME-A approach, so we executed a right 360 in the downwind to provide spacing for the incoming traffic. This was the point where putting the gear down was overlooked. Once we were reestablished in the downwind, we had to extend for incoming traffic (Cessna) on the ILS 27. We made our base turn and then turned for final. Since the throttle horn circuit breaker was pulled, we did not have the horn to warn us of the gear being up. We touched down on the thousand-foot markers and immediately had a propeller strike. There were three full rotations from the propeller before it came to a stop. We ended up scraping down the runway another 150-200' then came to a stop. (still on the runway) Immediately, I started to shut off the fuel and electrical switches, then made a call to traffic that we had a no-gear landing and would be needing service vehicles. There were no injuries from the landing.
