Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Collapsed left main landing gear, Sheered off Nose gear, Propeller bent and scraped.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On 12/16/2025 I was conducting a take off and landing training flight with my student [REDACTED] out of KFXE and we were staying in the pattern at KFXE to come back before night time. The flight roughly commenced at 16:00 local time and was supposed to be 1.5 hours long. We began with the flight following the normal procedure of checklist usage from pre-flight, to the start up to taxi, to the run up and the before take off checklist. I performed the checklist to demonstrate to him how to perform the checklist and to also help him get as much time out of the flight to practice take offs and landings. We flew one lap in the pattern and my student landed the plane with my assistance on the first lap. On the second lap everything looked like it was going as normal, I was correcting my student for pitch and altitude changes throughout the pattern which is something we have been working on maintaining constant. Once we got cleared to land and we turned Final everything looked like it was going well. The glide path was good, Configurations were set, his airspeed was within normal range with a little extra correcting for gust factor, he was stable, and we made sure heels were on the floor, he was just making minor corrections to find center line. Once we crossed the threshold he cut the power and began to round out over the runway too high and pitched the aircraft up suddenly way too much to about 10 -15 degrees pitch up if I remember Correctly to the point where the plane felt like it was sinking. I took the controls and tried adding power to either make sure the landing was safe or to go around, however I did so too late and we ended up porpoising down the runway to the point where the nose wheel snapped. At the time because everything happened so fast and maybe I had some adrenaline going too I did not think it was that hard of a landing and did not notice the porpoise. However, after seeing the video I realize what had happened. I tried saving the aircraft but I reacted too late and this will be a lesson I will remember forever. After we slid down the runway, I shut the plane off and cut off the fuel mixture and fuel pump to avoid a fire. I checked on my student to see if he was ok and we both got out of the plane to a safe distance. I called my company and spoke with members of the FAA, and Tower to advise them of the situation. I noticed the nose wheel was by the 500 ft markings when the airport personnel pointed it out. Lastly, at the time, the landing did not seem so hard and the porpoise which is something that I did not notice from how fast everything was happening but I did notice it in the video and I apologize and will answer any further questions to the best of my ability.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

By being more cautious with the controls and initiating a go around in a faster manner.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No
