Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Propeller destroyed.

Belly of aircraft abraded into the wing spar box

Some antennas on belly destroyed

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During my run up at KSPA, I took a business call that was very distressing. I was thinking about that call throughout the flight. The lesson learned is a) don't take calls during flight operations that have the potential to interfere with focus; b) when I am distracted from the necessary focus, stop and rethink my plan of action and perhaps delay the flight. In other words, follow the IMSAFE process. Had I done so I might well have recognized that stress might interfere with focus on my flight.

I had nearly 700 recorded recent landings in my DA40NG that I owned before purchasing the Panthera. The DA40NG plane has fixed gear as well as FADEC engine controls. This created a muscle memory that made landing fairly simple, as I only needed to manipulate the flaps and power as part of the landing sequence. There was no thought of mixture, propeller, or landing gear. In contrast I had only about 40 landings in the Panthera that has retractable landing gear and requires prop and mixture control.

Because of this muscle memory, into my home airport on the trip from KSPA to KFTY, I set up my power and flaps and was "good to go" from a memory point of view. I doubt this would have happened at an airport with which I was less familiar or if there had been anything challenging about the setup for the landing.

I also had not flown in more than 10 days. That is not a long time, but it allowed the DA40NG memory to overwhelm the newly learned skills needed to fly the Panthera.

As I approached KFTY I was cleared for the visual for 26. I set up for that landing and controlled the power and flaps appropriately. I prefer a relatively high approach and was where I wanted to be with respect to altitude and speed. The Panthera can be a challenge to slow down, but all was well. I flew it right to a soft landing on the centerline of 26. I had failed to lower the landing gear. I did not realize my mistake until pieces of the propeller were flying past me. I then intentionally used the rudder to try to get the plane to go the grass on the right side so as not to block the runway - I got part of the airplane clear but did not succeed in getting it off the runway before it stopped.

Once on the ground I arranged for a salvage company to lift the plane and the gear was lowered without a problem. The plane was then towed to a storage location at KFTY. Later, Lanier Flight Center picked up the plane and took it to KGVV for repair.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

I should not have accepted a business call during the run up. Once I made that mistake, I should have delayed the flight.

Before leaving KSPA, I should have done a practice circuit with a landing to "reactivate" my Panthera training.

The solution to prevent another event like this is to use my checklist which certainly includes "landing gear down." However, in trying to figure this out, I realize that the triggering events for the gear down are the "numbers" on downwind (i.e. be at less than 106kts at the numbers and engage the gear followed by the first notch of flaps), and in a straight in approach the FAF was used as my triggering event. On this flight, I was not in the pattern, nor did I have a final approach fix as part of my visual approach. Thus, locations that might have triggered by muscle memory were not part of the flight.

Had I recited the checklist out loud, I think I would have triggered myself to activate the landing gear.

With respect to making sure I don't repeat this mistake, I need to do a lot of pattern work to build muscle memory relating to the physical tasks of using the gear switch and the mental task of orally calling out the checklist items. It's not like I had a problem with a crosswind and need more instruction dealing with technique. Activating the lever is not a flight skill like crosswind landings. This landing was perfect - well except of the gear being up - in that I had the speed I wanted and was dead on the centerline. Here, the remedy is practice and more practice; and that practice has to include the physical and mental aspects of going through the sequence on my checklist.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Additional space for answers to any question.)

My primary concern is to be proficient and safe as a pilot. I earned my original certificate in 1979 and then did not fly after 1980 until 2022. I immediately began instrument training. I moved to the Panthera to get more load and better speeds. I failed to recognize how much memory from the DA40NG continued to follow me. There are some quirks with the instruments (G3X in Panthera) compared to the instruments in the DA40 (G100nxi). The most frustrating of which is that when operating the autopilot the radio is too often accidentally touched and changed. That was not my problem on the DOA.

Prior to this I had never failed to timely engage the landing gear. I had a pattern - slow to 106, use right hand to activate gear, hold hand on lever until three greens, then do flaps, then scan the glide path, speed, power, gear and flaps throughout the landing process. That worked. I will work hard to create muscle memory that includes use of the checklist that I have and failed to recite..

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE.

I understand that the information provided may be subject to public release.
