Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

Propeller strike - New propeller Required.

- Engine Inspection following prop strike.
- Lower Engine Firewall Requires replacement.
- Lower NLG Attachments sheared.
- NLG strut and upper brackets Require inspection.
- Lower Forward cabin skin buckled.
- Pilot and Copilot Forward floor panels damaged.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I contacted the student, [REDACTED] and obtained her statement and a recall of events. Here is what she said and discussed with me:

The solo flight was conducted at Newnan Coweta County Airport (KCCO)

The initial run-up was good, and everything was normal.

During her pre-takeoff checks, she realized that traffic wasn't showing up on her Foreflight display, but she could still see local traffic on the G1000 MFD. Not having traffic appear in her Foreflight application may have caused some confusion and concern at the beginning.

She proceeded to take off and fly to the designated practice area, then conducted maneuvers consisting of steep turns and slow flight.

She noted that during the flight, the wind was strong enough to move her and the aircraft around a bit. Not enough that she felt it was out of limits or her capabilities, but enough to heighten her concerns a little. It may have been another factor that increased her solo jitters during the flight.

[REDACTED] then returned to KCCO to conduct some landings. The landings were stop-and-goes on the runway. There were no taxis backs off the runway. The student mentioned this and said it probably wasn't a great thing to do in hindsight. Taxiing off the runway and taking additional time to process things would have been good. She will keep this in mind for future flights.

She went to take off the third time and realized she had the flaps down. This spooked her even more and created another problem/distracted she had to fix during the takeoff.

During the third landing attempt, the student pilot didn't remember much. She remembers seesawing down the runway. She recollected flaring too high and getting slow. She attempted to correct this by adding power and lowering the nose of the aircraft. This resulted in her coming in fast and flat, probably causing the aircraft oscillations mentioned. She recognized her unstable state and went around. She can't recall whether any of the damage to the aircraft occurred during this landing attempt.

At this point, the student pilot was really shaken and wanted to be on the ground. Much of what happened on the third landing attempt happened on the fourth and final landing attempt as well. This resulted in another hard landing with aircraft oscillations down the runway. This was where most of the aircraft's damage likely occurred. She was able to land the aircraft and taxi back to the FBO. She recalls that the aircraft was hard to control on the taxi back. This indicates to me that the fourth attempt at landing is where most, if not all, of the aircraft's damage occurred.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

Pilot retraining in the respective program.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
