Description of Damage to Aircraft and Other Property (Use additional sheet, if necessary.)

left wing sheared from fuselage, right wing penetrated 50% of chord at mid span, canopy shattered, fuselage forward of landing gear fractured.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink.)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

As a participant in the biennial Carolina Wave Camp (March 3-10), I arrived in Marion, NC on Monday March 2 with my glider in tow. The Wave Camp is an opportunity to fly atmospheric waves over Mt Mitchell, which sometimes allows unpowered flights to above 20,000 ft MSL. On Monday I drove with [REDACTED] a very experienced glider pilot, to explore possible emergency landing sites in the areas we would be operating during the Camp. About 5 suitable sites were visited. I also completed assembling my glider and conducted a post-assembly check, controls check, and pre-flight to be ready to fly the next day.

Tuesday was a non-flying day due to poor soaring conditions. On Wednesday, I rode with [REDACTED] in his 2-place glider in an area familiarization flight covering most of the camp flight area and lasting about an hour.

On Thursday, March 5 at 18:15 UTC I departed Shiflet Field (9A9) located in Marion, NC in my Glasflugel Kestrel glider (N9919).

Conditions were good with 10+ mi visibility, scattered clouds at roughly 6,500 ft, and mild surface winds. The purpose of the flight was mainly thermalling and area familiarization.

I released from the tow plane north of 9A9 at about 2,000 ft AGL (approx. 3,000 ft MSL) and turned north to join two other gliders circling in a thermal.

I left this thermal at about 5,000 ft MSL and meandered northwest to multiple additional thermals marked by clouds, topping out at around 5,000 ft MSL in each. I then headed north and crossed the ridge along which the Blue Ridge Parkway runs at about 5,000 MSL and 1,400 ft above the ridge. Lift had been plentiful and additional promising looking clouds appeared to the northwest in the direction of the Mt. Mitchell ridge. After finding two clouds unproductive, I turned to the southeast to reverse course and cross back over the Blue Ridge. There was only one known suitable land-out in the valley beneath me and I could not see it. I knew of several suitable land-outs in the valley on the other side of the Blue Ridge.

It very soon became apparent I did not have enough altitude to clear the ridge if I took a direct path back to 9A9, so I veered easterly where the ridge top was lower. As I got closer to the ridge, I spotted a grass airfield on the north side of the ridge of which I had been previously unaware. I was later told the private airstrip is called 'Strawberry Ridge', near Little Switzerland, NC.

My altitude and glide path appeared adequate to reach the field until I was perhaps a few hundred yards away from the approach end. There it became apparent I would impact the top 10-15 feet of trees at the approach end of the runway, before reaching the field. This was probably due to flying through more rapidly descending air than expected when on final approach. I then initiated a 180-degree left turn away from the ridge, but my left wing impacted trees when before 30 degrees of the turn was completed. I came to rest inverted in a heavily wooded area on a steep slope. The impact location was roughly 200 ft short of the runway.

I extricated myself from the cockpit and crawled to sit against a tree, with considerable back pain. I attempted to stand but became light-headed, so remained reclining until rescuers arrived. I did not lose consciousness at any point.

My iPhone was thrown from the wreckage but my Apple watch stayed on my wrist and initiated a fall alarm through the phone. Emergency services and my wife and daughters received the notification. I was able to converse with emergency services by phone through the Apple watch after multiple call-in attempts by emergency services. Emergency workers dragged and carried me from the crash site to an ambulance for transport to the local hospital, Blue Ridge, in Spruce Pine, NC. I was later transported to Mission Hospital in Asheville, NC.

OPERATOR/OWNER SAFETY RECOMMENDATION (How could this accident/incident have been prevented?)

If I had turned back even 30 seconds earlier, when closer to the Blue Ridge, I could have made the Strawberry Ridge grass landing strip.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on a separate sheet.)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

State: _____ ZIP: _____

Country: _____

ADDITIONAL INFORMATION (Additional space for answers to any question.)

I was told that either the FAA's or NTSB's representative at the crash site took custody of the portable navigation device (Oudie 2) which was mounted in my cockpit at the time of the flight. I have no way to confirm this. If so, there should be a retrievable file on the Oudie 2 which shows the flight trace.

There are also 2 other panel-mounted devices which should have the flight trace data in them: a) An ILEC SN10B flight computer, and b) a FLARM Core anti-collision device. However, I am told the crash debris has been removed from the site to a location unknown to me.

Therefore I have no access to these devices.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE.

I understand that the information provided may be subject to public release.
