Description of Damage to Aircraft and Other Property *(Use additional sheet, if necessary.)*

Left wing station 88.75 experienced a bird strike, damaging the leading edge skin P/N: 35118-004 and forward Rib P/N: 35182-000. No other damage noted at this time.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink.)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed from KSFB from 9R. Climbing through around 1200 on on the outer edge of the Class Charlie a large black bird suddenly appeared on the left side of the aircraft. The instructor pilot took the controls to complete a diving right turn away from the bird. Once bird was over the wing, it dived towards the aircraft striking the left leading edge. After impact, instructor remained in control of aircraft swapped to the right fuel tank and turned off the electric fuel pump as a precautionary measure. Once no fuel was observed to be leaking and no adverse drag was felt on the left side, it was elected to continue to the KMLB airport as it was the home base for maintance. instructor executed the landing back into KMLB. A long landing was requested on 9R and flaps were not deployed until over the runway. Exited runway and taxi-ed back to Florida Tech's ramp without incident and shopped the aircraft.

OPERATOR/OWNER SAFETY RECOMMENDATION *(How could this accident/incident have been prevented?)*

To strengthen prevention, awareness and procedures to reduce the likelihood of this happening in the future, during the winter months where wildlife strike occur more frequently, we are adding a bird hazard into our preflight briefing, improving communication of bird activity NOTAMS, and stressing the importance of always scanning for wildlife and aircraft.
